

MCAL User Manual for Mcu

32-bit TriCore™ AURIX™ TC3xx microcontroller

About this document

Scope and purpose

This User Manual is intended to enable users to integrate the Microcontroller Abstraction Layer (MCAL) software for the TriCore™ AURIX™ family of 32-bit microcontrollers.

This document describes responsibilities of integrator in-charge of integrating MCAL software with the basic software (BSW) stack. This document also provides detailed information on safety, configuration and functions along with examples of usage of significant features.

Note: *Detailed information about package installation, safety and other generic information that are common across all modules are provided in MCAL User Manual General.*

Intended audience

This document is intended for anyone using the Mcu module of the TC3xx MCAL software.

Document conventions

Table 1	Conventions
Convention	Explanation
Bold	Emphasizes heading levels, column headings, table and figure captions, screen names, windows, dialog boxes, menus, sub-menus
<i>Italics</i>	Denotes variable(s) and reference(s)
Courier	Denotes APIs, functions, interrupt handlers, events, data types, error handlers, file/folder names, directories, command line inputs, code snippets
New	
>	Indicates that a cascading sub-menu opens when you select a menu item
[cover parentID=<alpha numeric value>]	Used for traceability completeness. Reader should ignore these.

Reference documents

This User Manual should be read in conjunction with the following documents:

- AURIX™ TC3xx MCAL User Manual General
- Specification of MCU Driver, AUTOSAR_SWS_MCU_Driver, AUTOSAR Release 4.2.2
- Specification of MCU Driver, AUTOSAR_SWS_MCU_Driver, AUTOSAR Release 4.4.0

Table of contents

Table of contents

	About this document	1
	Table of contents	2
1	Mcu driver	17
1.1	User information	17
1.1.1	Description	17
1.1.2	Hardware-software mapping	17
1.1.2.1	CONVERTER: primary hardware peripheral	18
1.1.2.2	SCU: primary hardware peripheral	18
1.1.2.3	STM: primary hardware peripheral	19
1.1.2.4	CCU6: primary hardware peripheral	19
1.1.2.5	GPT12: primary hardware peripheral	20
1.1.2.6	GTM: primary hardware peripheral	20
1.1.2.7	PMS: primary hardware peripheral	21
1.1.3	File structure	21
1.1.3.1	C file structure	21
1.1.3.2	Code generator plugin files	25
1.1.4	Integration hints	26
1.1.4.1	Integration with AUTOSAR stack	26
1.1.4.2	Multicore and Resource Manager	30
1.1.4.3	MCU support	31
1.1.4.4	Port support	31
1.1.4.5	DMA support	31
1.1.4.6	Interrupt connections	31
1.1.4.7	Example usage	32
1.1.5	Key architectural considerations	33
1.1.5.1	GTM: usage with complex drivers	33
1.1.5.2	Multicore support for MCU	33
1.1.5.3	Usage of Mcu_DeInit API	33
1.1.5.4	Error handling for Timer IP APIs	33
1.1.5.5	User mode support	33
1.1.5.6	Reset reason due to HSM	34
1.1.5.7	Reset reason due to multiple resets	34
1.1.5.8	Power modes entry	34
1.1.5.9	Generic AoUs to users of MCU	34
1.1.5.10	Timer channel reservation in MCU hardware resource allocation	34
1.1.5.11	Usage of Mcu_SetMode API	34
1.1.5.12	Cluster 0 clock should not be disabled if GTM is to be used	34
1.1.5.13	CCU6 and GPT12 initialization is performed only for the kernel/timers reserved by the user	34

Table of contents

1.1.5.14	Approximation of frequency to divider calculation	35
1.1.5.15	Timer APIs in the driver	35

1 Mcu driver**1 Mcu driver****1.1 User information****1.1.1 Description**

The MCU driver is responsible for configuring the SCU, GTM, CCU6, GPT12 and STM peripherals. The driver provides runtime services specified by AUTOSAR. The MCU driver is responsible for the following:

- Configuration of Clock, Reset and static low power mode functionalities as specified by AUTOSAR
- Configuration of Trap functionality
- Configuration of global features of GTM, CCU6 and GPT12 required by the BASIC drivers
- Provide library support for other drivers for timer IPs - GTM, CCU6, GPT12 and STM
- Configuration of phase synchronizer necessary for analog converters
- Runtime APIs requested by AUTOSAR for clock, reset, low power management and RAM initialization
- Runtime APIs for Trap management

Additionally, the MCU driver provides a centralized hardware resource reservation mechanism to the configurator for conflict-free allocation to the MCAL drivers. The resources capable of being reserved are CCU6 modules, GTM timer slices, ASCLIN slices, ERU slices and STM comparators. The MCU driver is delivered as a Post-Build variant. Post-Build architecture guarantees the ability to generate an independent HEX file for configuration alone.

1.1.2 Hardware-software mapping

This section describes the system view of the MCU driver and peripherals administered by it.

1 Mcu driver

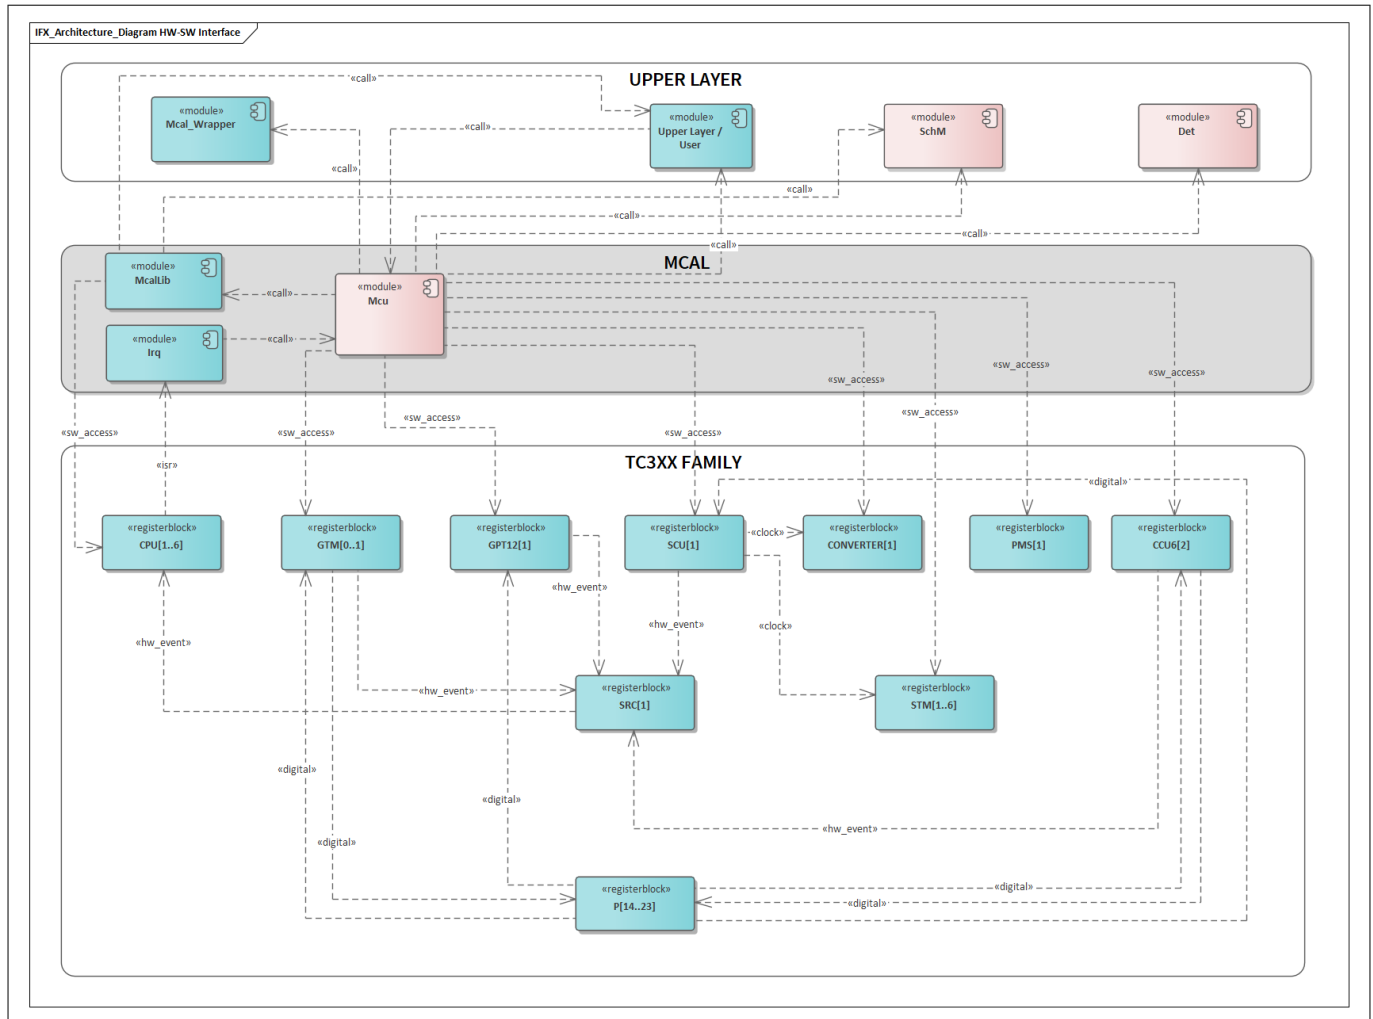

Figure 1 Mapping of hardware-software interfaces

1.1.2.1 CONVERTER: primary hardware peripheral

Hardware functional features

The MCU driver configures the convertor control block for providing a clock enable signal to synchronize the clock signals of all analog blocks (EVADC and EDSADC).

Users of the hardware

The phase synchronizer signal is used by the ADC and DSADC drivers, however the configuration for generating the signals is done by the MCU driver.

Hardware diagnostic features

The SMU alarms configured for the convertor control block are not monitored by the MCU driver.

Hardware events

Hardware events from the convertor control block are not used by the MCU driver.

1.1.2.2 SCU: primary hardware peripheral

Hardware functional features

1 Mcu driver

The MCU driver uses the SCU IP for the following:

- Configuring the clock tree
- Reset control
- Trap setting
- Power-mode control and transitions
- Configuration of ERU for pattern detection and output gating control

The unsupported features of SCU are:

- Emergency stop
- Watchdog timers
- System register unit

Users of the hardware

The SCU IP supplies clock for all the peripherals and the MCU driver is responsible for configuring the clock tree. To avoid conflicts due to simultaneous writes, update to all the ENDINIT protected registers is performed using the MCALLIB APIs.

Hardware diagnostic features

The SMU alarms configured for the SCU IP are not monitored by the MCU driver.

Hardware events

The hardware event for ERU channels is enabled based on the user configuration. The MCU driver invokes the call back function provided as interrupt handler by the ICU and DSADC driver on a hardware event.

1.1.2.3 STM: primary hardware peripheral

Hardware functional features

The MCU driver only provides configuration interfaces for the STM IP. The STM IP is used by other MCAL drivers for various applications. The compare match SFRs are configured at run time (by other drivers).

Users of the hardware

The MCU driver provides APIs to program the STM SFRs. The WDG and STM driver use these APIs to utilize the compare match feature of the STM IP.

Additionally, updates to the compare register are performed by the WDG and STM drivers. Since the compare registers are exclusively reserved for each driver, access to the compare registers by the reserving driver is allowed.

Hardware diagnostic features

Not applicable.

Hardware events

The hardware event for each channel is enabled based on the user configuration. The MCU driver invokes the call back function provided as interrupt handler by each driver on a hardware event.

1.1.2.4 CCU6: primary hardware peripheral

Hardware functional features

1 Mcu driver

The MCU driver only provides configuration interfaces for the CCU6 IP. The CCU6 IP is used by other MCAL drivers for various applications.

During the initialization the driver is responsible for enabling the clock for the CCU6 IP. The channel specific SFRs are configured at run time (by other drivers).

Users of the hardware

The MCU driver provides APIs to program the CCU6 SFRs. The PWM and ICU driver use these APIs to initialize, de-initialize, enable and disable channels.

Additionally, updates to the channel specific SFRs are performed by the PWM and ICU drivers. Since the channels are exclusively reserved for each driver, access to the channel specific SFRs by the reserving driver is allowed.

Hardware diagnostic features

Not applicable.

Hardware events

The hardware event for each channel is enabled based on the user configuration. The MCU driver invokes the call back function provided as interrupt handler by each driver on a hardware event.

1.1.2.5 GPT12: primary hardware peripheral

Hardware functional features

The MCU driver only provides configuration interfaces for the GPT12 IP. The GPT12 IP is used by other MCAL drivers for various applications.

During the initialization the driver is responsible for enabling the clock and configuring the block pre-scalers for the GPT12 IP. The channel specific SFRs are configured at run time (by other drivers).

Users of the hardware

The MCU driver provides APIs to program the GPT12 SFRs. The GPT and ICU driver use these APIs to initialize, de-initialize, enable and disable channels.

Additionally, updates to the channel specific SFRs are performed by the GPT and ICU drivers. Since the channels are exclusively reserved for each driver, access to the channel specific SFRs by the reserving driver is allowed.

Hardware diagnostic features

Not applicable.

Hardware events

The hardware event for each channel is enabled based on the user configuration. The MCU driver invokes the call back function provided as interrupt handler by each driver on a hardware event.

1.1.2.6 GTM: primary hardware peripheral

Hardware functional features

The MCU driver only provides configuration interfaces for the GTM IP.

During the initialization the driver is responsible for configuring the global blocks of GTM [CMU, CCM, TBU, TOUTSEL, TIMINSEL]. The channel specific SFRs are configured at run time (by other drivers).

Users of the hardware

1 Mcu driver

The global functional blocks of GTM are centrally administered by the MCU driver.

The MCU driver provides APIs to program the GTM [TOM, ATOM, TIM] channel SFRs. The PWM, GPT, ADC, DSADC, WDG, OCU and ICU drivers use these APIs to initialize, de-initialize, enable and disable channels.

Additionally, updates to the channel specific SFRs are performed by the MCAL drivers also. Since the channels are exclusively reserved for each driver, access to the channel specific SFRs by the reserving driver is allowed.

Hardware diagnostic features

The SMU alarms configured for the GTM IP are not monitored by the MCU driver.

Hardware events

The hardware event for each channel is enabled based on the user configuration. The MCU driver invokes the callback function provided as interrupt handler by each driver on a hardware event.

1.1.2.7 PMS: primary hardware peripheral

Hardware functional features

The MCU driver uses the PMS IP for changing the active power-mode of the controller. The supported power modes are:

- Normal
- Idle
- Sleep
- Standby

The unsupported features of PMS are:

- Load jump sequencing and voltage droop
- Core Die Temperature Sensor
- Power supply generation and monitoring
- Standby controller

Users of the hardware

The MCU driver exclusively utilizes the PMS IP for power mode management.

Hardware diagnostic features

Not applicable.

Hardware events

The MCU driver configures the wake-up events from the PMS IP.

1.1.3 File structure

1.1.3.1 C file structure

This section provides details of the C files of the MCU driver.

1 Mcu driver

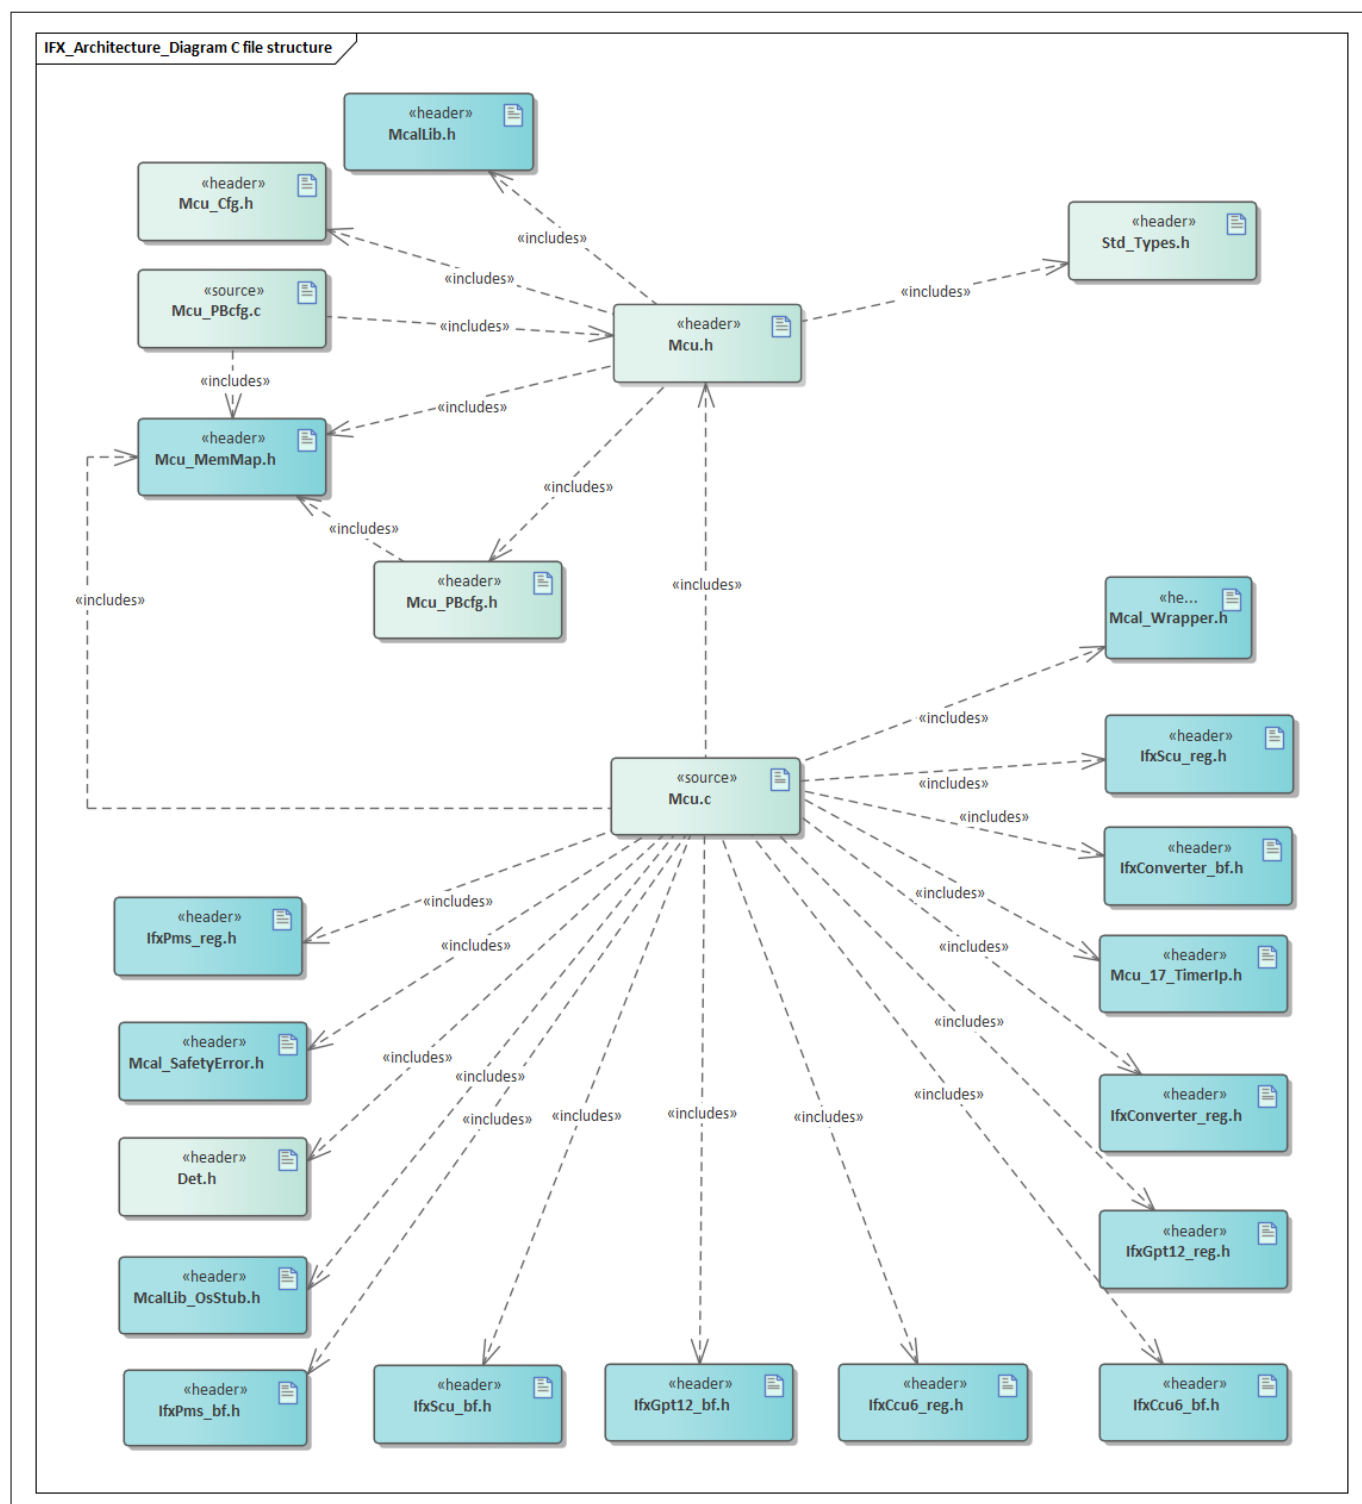

Figure 2 Mcu_C_file_structure-1.png

1 Mcu driver

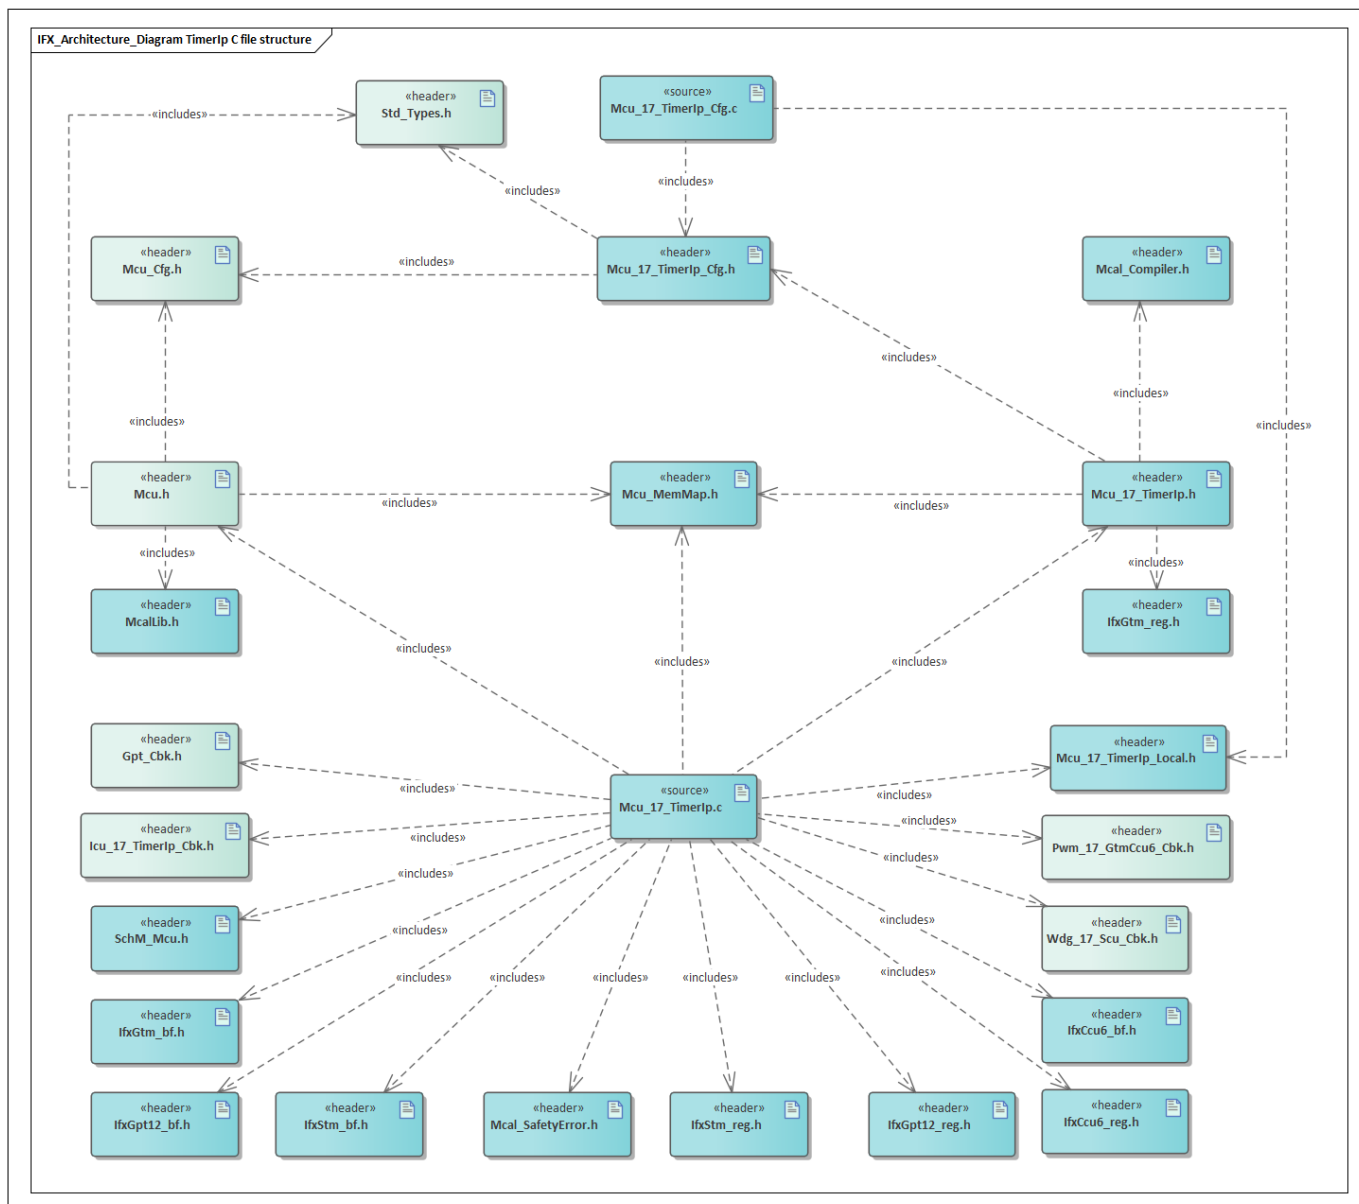

Figure 3 Mcu_TimerIp_C_file_structure-2.png

Table 2 C file structure

File name	Description
Det.h	Provides the exported interfaces of Development Error Tracer
IfxCcu6_bf.h	SFR header file for CCU6
IfxCcu6_reg.h	SFR header file for CCU6
IfxConverter_bf.h	SFR header file for Converter
IfxConverter_reg.h	SFR header file for Converter
IfxGpt12_bf.h	SFR header file for GPT12
IfxGpt12_reg.h	SFR header file for GPT12
IfxPms_bf.h	SFR header file for Pms

(table continues...)

1 Mcu driver
Table 2 (continued) C file structure

File name	Description
IfxPms_reg.h	SFR header file for Pms
IfxScu_bf.h	SFR header file for SCU
IfxScu_reg.h	SFR header file for SCU
McalLib.h	Static header file defining prototypes of data structure and APIs exported by the MCALLIB.
McalLib_OsStub.h	McalLib_OsStub.h provides macros to support user mode of Tricore. This shall be included by other drivers to call OS APIs.
Mcal_SafetyError.h	Header file containing the prototype of the API for reporting safety-related errors
Mcal_Wrapper.h	Provides the exported interfaces for Production Error and Runtime Development Errors. Implemented by default to include functions of Dem.h and Det.h files. This file can be modified by the user but function prototype is not user modifiable.
Mcu.c	MCU source file providing implementation of APIs (including AUTOSAR) relating to initialization, clock, power modes, reset, trap, etc.
Mcu.h	Header file providing prototypes of APIs and data types. This file exports only necessary interfaces for upper layer
Mcu_17_TimerIp.h	Header file defining prototypes of data structures and APIs of Timer IPs (GTM, CCU6 and GPT12), containing functions such as initialization, enable, interrupt handlers and other services and is included by Mcu_17_TimerIp.c source file
Mcu_Cfg.h	Generated header file containing macros
Mcu_MemMap.h	File (Static) containing the memory section definitions used by the MCU driver
Mcu_PBcfg.c	Generated header file containing configuration data of the user
Mcu_PBcfg.h	File (Generated) containing declaration of the post-build configuration data structures
Std_Types.h	Standard type declaration file as defined by AUTOSAR. It is independent of compiler or platform.
Gpt_Cbk.h	Header file providing prototypes of callback APIs
Icu_17_TimerIp_Cbk.h	Header file to declare the callback APIs
IfxCcu6_bf.h	SFR header file for CCU6
IfxCcu6_reg.h	SFR header file for CCU6
IfxGpt12_bf.h	SFR header file for GPT12
IfxGpt12_reg.h	SFR header file for GPT12
IfxGtm_bf.h	SFR header file for GTM
IfxGtm_reg.h	SFR header file for GTM
IfxStm_bf.h	SFR header file for STM
IfxStm_reg.h	SFR header file for STM
McalLib.h	Static header file defining prototypes of data structure and APIs exported by the MCALLIB.

(table continues...)

1 Mcu driver
Table 2 (continued) C file structure

File name	Description
Mcal_Compiler.h	Header file providing abstraction for TriCore™-intrinsic instruction.
Mcal_SafetyError.h	Header file containing the prototype of the API for reporting safety-related errors
Mcu.h	Header file providing prototypes of APIs and data types. This file exports only necessary interfaces for upper layer
Mcu_17_TimerIp.c	File (Static) containing implementation of APIs of Timer IPs - GTM, CCU6 and GPT12, initialization, enable, interrupt and other services
Mcu_17_TimerIp.h	Header file defining prototypes of data structures and APIs of Timer IPs (GTM, CCU6 and GPT12), containing functions such as initialization, enable, interrupt handlers and other services and is included by Mcu_17_TimerIp.c source file
Mcu_17_TimerIp_Cfg.c	Generated source file, which contains the user information for each the Timers - CCU6, GPT12 and GTM channels
Mcu_17_TimerIp_Cfg.h	Generated header file for Timer IPs APIs
Mcu_17_TimerIp_Local.h	Header file contains declaration of callback data for ERU, CCU6, GPT12, GTM (TIM, TOM, ATOM) and STM
Mcu_Cfg.h	Generated header file containing macros
Mcu_MemMap.h	File (Static) containing the memory section definitions used by the MCU driver
Pwm_17_GtmCcu6_Cbk.h	Includes callback header definition
SchM_Mcu.h	Non-productized file. Contains prototype of SchM_Enter/Exit interfaces needed by Timer APIs
Std_Types.h	Standard type declaration file as defined by AUTOSAR. It is independent of compiler or platform.
Wdg_17_Scu_Cbk.h	Header file contains call back function of the WDG driver.

1.1.3.2 Code generator plugin files

This section provides details of the code generator plugin files of the MCU driver.

1 Mcu driver

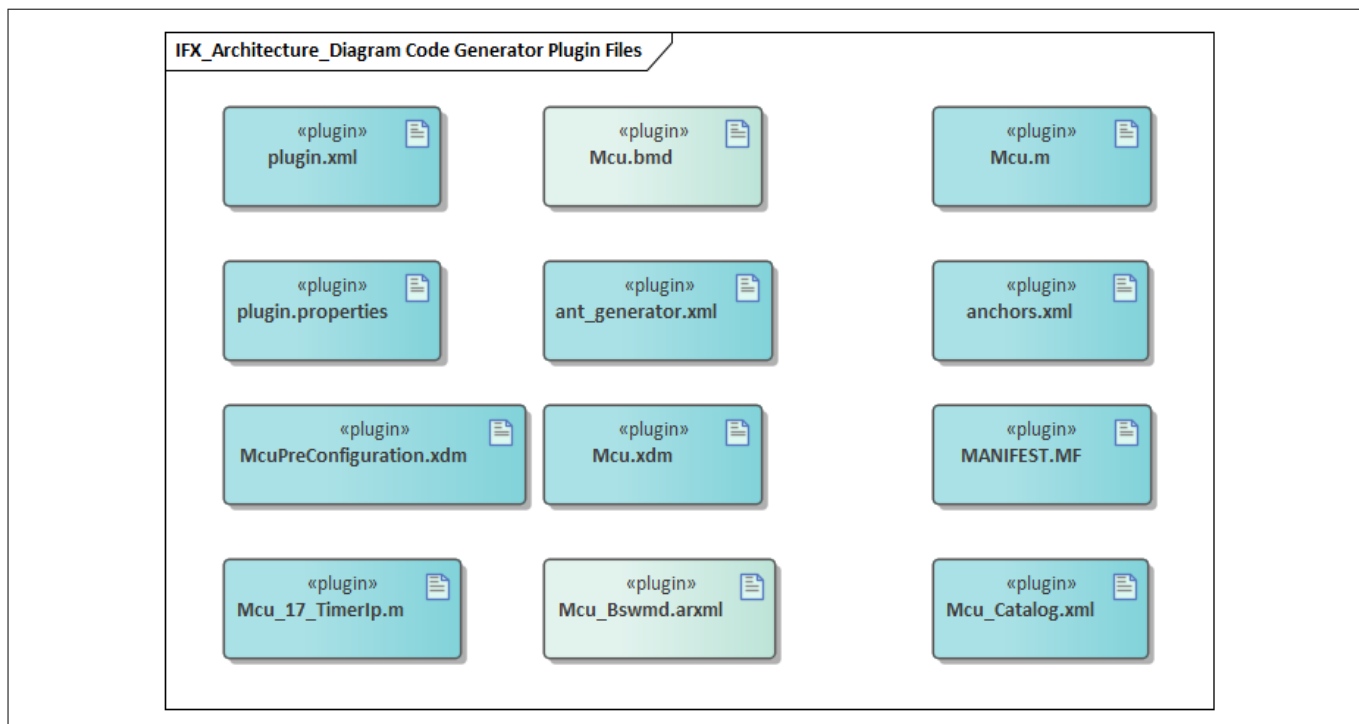

Figure 4 Mcu_Code_Generator_Plugin_Files-1.png

Table 3 Code generator plugin files

File name	Description
MANIFEST.MF	Tresos plugin support file containing metadata for the MCU driver
Mcu.bmd	AUTOSAR format XML data model schema file (for each device)
Mcu.m	Code template macro file for the MCU driver
Mcu.xdm	Tresos format XML data model schema file
McuPreConfiguration.xdm	Tresos format XML data model schema file
Mcu_17_TimerIp.m	Code template macro file for Timer APIs in the MCU driver
Mcu_Bswmd.arxml	AUTOSAR format module description file
Mcu_Catalog.xml	AUTOSAR format catalog file
anchors.xml	Tresos anchors support file for the MCU driver
ant_generator.xml	Tresos support file to generate and rename multiple post-build configuration when using variation point
plugin.properties	Tresos plugin support file for the MCU driver
plugin.xml	Tresos plugin support file for the MCU driver

1.1.4 Integration hints

This section lists the key points that an integrator or user of the MCU driver must consider.

1.1.4.1 Integration with AUTOSAR stack

This section lists the modules, which are not part of MCAL, but are required to integrate the MCU driver.

1 Mcu driver

- **EcuM**

The ECU Manager module is a part of the AUTOSAR stack that manages common aspects of ECU. Specifically, in the context of MCAL, EcuM is used for initialization and de-initialization of the software drivers. The EcuM module provided in the MCAL package is a stub code and needs to be replaced with a complete EcuM module during the integration phase.

- **Memory mapping**

Memory mapping is a concept from AUTOSAR that allows relocation of text, variables, constants and configuration data to user-specific memory regions. To achieve this, all the relocatable elements of the driver are encapsulated in different memory-section macros. These macros are defined in the `Mcu_MemMap.h` file.

The `Mcu_MemMap.h` file is provided in the MCAL package as a stub code. The integrator must place appropriate compiler pragmas within the memory-section macros. The pragmas ensure that the elements are re-located to the correct memory region. A sample implementation listing the memory-section macros is shown as follows.

1 Mcu driver

```

/* Sample implementation of Mcu_MemMap.h */
/**** CONFIGURATION DATA ****/

#if defined MEMMAP_ERROR
#error Mcu MemMap file definition is not correct.
#endif
```

- **DET**

The DET module is a part of the AUTOSAR stack that handles all the development and runtime errors reported by the BSW modules. The MCU driver reports all the development errors to the DET module through the `Det_ReportError()` API. The user of the MCU driver must process all the errors reported to the DET module through the `Det_ReportError()` API.

The `Det.h` and `Det.c` files are provided in the MCAL package as a stub code and needs to be replaced with a complete DET module during the integration phase.

- **Mcal_Wrapper**

This Driver performs reporting of the Production and Runtime errors. The Handling of the reported errors shall be done by the user. The `Mcal_Wrapper_Det_ReportRuntimeError()` API, `Mcal_Wrapper_Dem_SetEventStatus()` API and `Mcal_Wrapper_Dem_ReportErrorStatus()` API are provided in the `Mcal_Wrapper.c` and `Mcal_Wrapper.h` files as a stub code, and can be updated by the integrator to handle the reported errors. The files `Mcal_Wrapper.c` and `Mcal_Wrapper.h` are user modifiable but the function prototype is not user modifiable and by default the Mcal Wrapper function shall call AUTOSAR DEM and DET Modules.

The user of the Mcu driver shall process all the production errors (fail/pass) reported to the `Mcal_Wrapper` module. The interface used for reporting production error in AUTOSAR version 4.2.2 is

`Mcal_Wrapper_Dem_ReportErrorStatus()` and for AUTOSAR version 4.4.0 is

`Mcal_Wrapper_Dem_SetEventStatus()`. The `Mcal_Wrapper.c` and `Mcal_Wrapper.h` files are provided in the MCAL package as a stub code and can be replaced with a user specific production error handling module during the integration phase.

- **SchM**

1 Mcu driver

The SchM module is a part of the RTE that manages the Basic Software Scheduler. The MCU driver uses the exclusive areas defined in `SchM_Mcu.h` file to protect the SFRs and variables from concurrent accesses from different threads. The SchMs identified for the MCU driver are:

- ATOM AGC registers
- TOM TGC registers

The `SchM_Mcu.h` and `SchM_Mcu.c` files are provided in the MCAL package as an example code and needs to be updated by the integrator. The user must implement the SchM functions defined by the MCU driver as **suspend / resume** of interrupts for the CPU on which the API is invoked. A sample implementation of the SchM functions is shown as follows.

```
void SchM_Enter_Mcu_TomTgcReg(void)
{
    SuspendAllInterrupts();
}

void SchM_Exit_Mcu_TomTgcReg(void)
{
    ResumeAllInterrupts();
}

void SchM_Enter_Mcu_AtomAgcReg(void)
{
    SuspendAllInterrupts();
}

void SchM_Exit_Mcu_AtomAgcReg(void)
{
    ResumeAllInterrupts();
}
```

- **Safety error**

The MCU driver will report all the detected safety errors through the `Mcal_ReportSafetyError()` API.

The driver performs only detection and reporting of the safety errors. The handling of the reported errors shall be done by the user. The `Mcal_ReportSafetyError()` API is provided in the `Mcal_SafetyError.c` and `Mcal_SafetyError.h` files as a stub code, and must be updated by the integrator to handle the reported errors.

Note: All DET errors are also reported as safety errors (error code used is same as DET).

- **Notifications and callbacks**

The MCU driver does not provide any callbacks or notifications.

- **Operating system**

The OS or application must ensure correct type of service and interrupt priority is configured in the SR register. Enabling and disabling of interrupts must also be managed by the OS or application.

The OS files provided by the MCAL package is only an example code and must be updated by the integrator with the actual OS files for the desired function.

1.1.4.2 Multicore and Resource Manager

The MCU driver supports execution of its runtime APIs simultaneously from all CPU cores (initialization APIs are `Mcu_Init()`, `Mcu_InitClock()`, `Mcu_DistributePllClock()` and `Mcu_DeInit()`). In general, apart from the

1 Mcu driver

initialization APIs of MCU driver, other APIs may be invoked from several CPU cores in parallel with some restrictions, which are also described in this section. The following are the key points to be considered with respect to multicore in the driver:

- Initialization APIs `Mcu_Init()`, `Mcu_InitClock()`, `Mcu_DistributePllClock()` and `Mcu_DeInit()` can only be invoked by the master core.
- DETs will be raised in case APIs are invoked with mismatch of core.
- Locating constants, variables and configuration data to correct memory space should be done by the user. Memory sections are marked GLOBAL (common to all cores). The following should be considered by the user to ensure better performance of the driver:

Code section:

The executable code of the MCU driver is placed under single MemMap section. The executable code can be relocated to any PFlash region.

Data section:

The sections marked as global should be relocated to the non-cached LMU region.

Configuration data and constants:

The sections marked as global should be relocated to the PFlash of the master core.

Note: Relocating of code, data or constants to a distant memory region would impact execution timings.

1.1.4.3 MCU support

Not applicable for the MCU driver.

1.1.4.4 Port support

The MCU driver does not use any services provided by the PORT driver.

1.1.4.5 DMA support

The MCU driver does not use any services provided by the DMA driver.

1.1.4.6 Interrupt connections

The MCU driver clears the interrupt flags for intended channel for GTM(TIM, TOM, ATOM), CCU6, STM and ERU before invoking the ISR of respective user driver. Refer to Interrupt service routines section for ISRs provided by the MCU driver. Refer to respective driver user manual for details on the user driver's ISR (e.g. ICU, PWM, GPT etc.).

1 Mcu driver

1.1.4.7 Example usage

This section explains an example usage scenario of the MCU Driver for a nominal case.

Configuration of the driver

MCU Driver is configured before usage and configuration files are generated and made available during software build process.

Initialization of driver

Step 1: Include the Mcu.h header file, to include definition of the MCU driver configuration data structure..

Step 2: Invoke the Mcu_Init () API by passing configuration structure pointer as an input parameter.

Example:

```
#include "Mcu.h"
Mcu_Init (&Mcu_Config); /*Mcu_Config is the configuration structure variable for MCU */
```

Initialization of PLLs and Clocks

Pre-requisite: The Mcu_Init () API must be invoked before this phase.

Step1: Invoke the Mcu_InitClock () API by passing the clock configuration index

Example:

```
TempVal = Mcu_InitClock (0); /* 0 is clock setting id */
```

Step2: Wait until the system PLL is locked.

Example: Add a wait loop around the following condition:

```
while(Mcu_GetPllStatus ( ) != MCU_PLL_LOCKED); /* Wait for PLLs to Lock */
```

Step3: Invoke the Mcu_DistributePllClock() API to change the clock source as PLL and ramp up/down to the configured clock frequencies.

Example:

```
TempVal = Mcu_DistributePllClock ( );
```

De-Initialization of driver

Step1: Invoke the Mcu_DeInit () API. The API de-initializes all MCU relevant global configuration registers except for the PLL and clock-related registers.

Using low power modes

The MCU Driver shall be initialized before using low power mode API. Low power mode APIs shall be enabled as per configuration

Step1: Configure the wakeup source before entering into low power modes. Special configurations for STANDBY modes are available in McuModeSettingConf container. Ensure the executing core is authorized to perform low power mode transitions, as per the McuIdleModeCpuCore and McuSystemModeCpuCore configuration parameters.

1 Mcu driver

Step2 (For IDLE/SLEEP): Invoke as shown below. For example for SLEEP mode.

```
Mcu_SetMode (MCU_SLEEP);
```

Step2 (For STANDBY): It is important that wakeup source status flags are cleared on exit of standby mode to ensure further wake-ups from standby state are enabled.

Note: The initial 64 bytes (16 32-bit words) from the start address of DLMU0 and DLMU1 shall not be used by application, as this memory region is used by start-up software during standby mode.

Example sequence during STANDBY entry:

```
Temp_Val = Mcu_GetWakeupCause ();  
Mcu_ClearWakeupCause (Temp_Val);  
Mcu_SetMode (MCU_STANDBY);
```

1.1.5 Key architectural considerations

1.1.5.1 GTM: usage with complex drivers

The user must consider the following points while using the GTM IP outside of the MCU driver.

The MCU driver enables the clock for a cluster only if GTM (TIM, TOM or ATOM) channels are reserved inside the McuHardwareResourceAllocationConf for that particular cluster.

When none of the GTM (TIM, TOM and ATOM) channels are reserved inside the McuHardwareResourceAllocationConf container for a particular cluster, the clock to the TIM, TOM and ATOM modules of that cluster is set to its default value.

The configurable clocks and the fixed clocks for the clusters are configured as per user configuration.

1.1.5.2 Multicore support for MCU

MCU initialization, de-initialization and clock tree configuration should be carried out by the master core with the following APIs: Mcu_Init, Mcu_DeInit, Mcu_InitClock and Mcu_DistributePllClock. These APIs shall not be invoked from the slave core(s). [cover parentID MCU={B4FAB0B9-7333-4da0-8A40-59575AEBFF6E}]

1.1.5.3 Usage of Mcu_DeInit API

The Mcu_DeInit API should be called only after all functions have completed their execution in slave cores.

[cover parentID MCU={E02F04BC-B8D2-47c0-83D2-E9BA65207E8E}]

1.1.5.4 Error handling for Timer IP APIs

DETs and Production errors are not reported by the Timer IP APIs. Hence the integrity of the input arguments for these APIs must be done by the user of these APIs.

[cover parentID MCU={46F34BBF-11B7-4ac0-9DA7-73566A300E9D}]

1.1.5.5 User mode support

The MCU Driver supports Supervisor and User-1 modes to write into registers which can be written in the Supervisor mode and User-1 mode.

[cover parentID MCU={E0E98A25-3A4F-478b-B80B-9237918239B5}]

1 Mcu driver**1.1.5.6 Reset reason due to HSM**

The Mcu_GetResetReason API does not support application and system resets occurring due to HSM. If an application/system reset due to HSM occurs, then Mcu_GetResetReason returns MCU_RESET_UNDEFINED. In such case, user must use Mcu_GetResetRawValue API to identify the reset reason.

[cover parentID MCU={15307DAC-2ED5-42fe-BDF9-00BC40FCB1FA}]

1.1.5.7 Reset reason due to multiple resets

The Mcu_GetResetReason API does not support multiple reset reasons, unless they are associated with power on reset as there are many other combinations which cannot be covered.

[cover parentID MCU={30EB1B27-5B0A-4581-9C00-05345C1945AB}]

1.1.5.8 Power modes entry

Before entering any power down mode like Idle, sleep or standby, the steps for ramping down the frequencies mentioned in the Power management system (PMS) chapter of the HW Target Specification should be followed.

[cover parentID MCU={3C41313F-F55F-46b3-A2B4-B384C5205D21}]

1.1.5.9 Generic AoUs to users of MCU

Users of the MCU shall ensure to provide valid input parameters for TOM/ATOM, CCU6, GPT12 APIs, MCU De-init and Timer Ip De-init APIs should be called before re-initializing. Modules shall use the APIs provided by the MCU driver to access common resources and to perform a force update of the GTM registers.

[cover parentID MCU={AB317AE6-76D0-433d-ADE5-992094CB5901}]

1.1.5.10 Timer channel reservation in MCU hardware resource allocation

For GTM, CCU6, GPT12 and ERU hardware channels, channel reserved and not utilized by any of the drivers, has to be unreserved. Similarly for STM comparators, comparator reserved and not utilized by any of the driver should be unreserved.

1.1.5.11 Usage of Mcu_SetMode API

If the MCU driver is programmed to enter into the sleep or standby mode, where all the CPUs unanimously decide to enter the sleep/standby mode, then the slave cores should enter the respective power down modes first, with the master core being the last CPU to enter the power down mode.

[cover parentID MCU={E8E1B722-AE0A-4bb6-BD92-F79F3A200DA4}]

1.1.5.12 Cluster 0 clock should not be disabled if GTM is to be used

Cluster 0 clock should always be kept enabled in the configuration if the GTM is used as CMU derives its clock from Cluster 0 clock.

[cover parentID MCU={2EDBA464-E77A-423c-A5DB-978106D4819F}]

1.1.5.13 CCU6 and GPT12 initialization is performed only for the kernel/timers reserved by the user

CCU6 and GPT12 initialization is performed only for the kernel/timers reserved by the user.

1 Mcu driver**1.1.5.14 Approximation of frequency to divider calculation**

In MCU clock configuration container McuClockSettingConfig the user enters a desired frequency for all the clocks.

The MCU driver automatically calculates the divider for all the clocks based on configured clock frequency and its source frequency (Source Frequency / Configured Clock Frequency).

If the calculated divider is an integer then the exact calculated value for the divider is programmed in the SFR. In case the calculated divider is not an integer but within ± 0.1 of an integer. Then the closest integer value is considered and programmed.

For example if the McuClockReferencePointFrequency2 is 200 MHz and McuI2CFrequency is configured as 66.6 MHz, the calculated divider value is 3.003.

In this scenario, a value of 3 will be considered to be programmed for the divider value as it is within the threshold of ± 0.1 .

1.1.5.15 Timer APIs in the driver

The MCU driver contains a submodule apart from providing its main functionality as described in AUTOSAR. The submodule, Mcu_17_TimerIp, contains support functions for GTM, CCU6 and GPT12 timer channels, which may be used by other drivers for initializing, starting and so on of timer channels. The MCU driver through the Mcu_Init() API initializes the GTM global configurations such as cluster, clock management unit, time base unit, etc. initializes the clock control for CCU6 and GPT12.

1 Mcu driver

1.2 Assumptions of Use (AoU)

The AoU for the MCU driver are as follows.

- **Atomic access using TriCore atomic instruction for ERU registers**

User of the ERU shall ensure that all the ERU-specific SFRs are accessed atomically.

[cover parentID MCU={7E9E92CE-7018-4b24-B184-DB24346D9E8A}]

- **ConfigPtr passed to InitCheck**

User of the MCU shall ensure that InitCheck is invoked with the same ConfigPtr that was used during initialization.

[cover parentID MCU={ADE0F1CA-CEC3-423c-AA12-F673593DB8F2}]

- **Correctness of the configuration is generated - ERU**

User of the MCU (ERU) shall ensure that the resource allocation information generated for the ERU channels is as per the configuration in the GUI.

[cover parentID MCU={C4CA831B-4FF9-4d97-A06B-B571161992DE}]

- **Critical section protection with Interrupt enable/disable**

User of the MCU (TOM/ATOM) shall ensure that the critical section protection provided by the MCU for TOM and ATOM shall be implemented to disable interrupts.

[cover parentID MCU={276431BA-062F-47b5-B2E8-270B6095F087}]

- **Freedom from Interference**

It is the onus on the user to provide protection to the MCAL data and SFRs from the QM software to avoid any SFR or memory corruption.

[cover parentID MCU={78293C3C-A3AB-4c45-BE00-30A0D271FF97}]

- **Generic AoUs for the users of the MCU**

- Drivers using the MCU shall ensure that GTM, CCU6 and GPT12 APIs are invoked after completion of the MCU initialization (clock tree initialization).

- Drivers using the MCU shall ensure to provide valid input parameters for TIM/TOM/ATOM, CCU6 and GPT12 APIs.

- MCU de-init and TimerIp de-init APIs shall be called before re-initializing the MCU TimerIp-related initialization services, respectively.

- Common resources shall be accessed using the MCU APIs.

[cover parentID MCU={E91C15B4-38E0-485f-ADAA-EBCFFD98D831}]

- **InitCheck sequence**

User shall invoke the Mcu_InitCheck() API to ensure the initialization is done correctly.

The McuInitCheckApi parameter shall be enabled and the user of the MCU shall call the InitCheck function before the execution of any runtime API (except GetVersionInfo) but after the completion of the MCU initialization sequence.

[cover parentID MCU={AF9A5DC2-05BA-4b55-8377-D1A640B25832}]

- **Interrupt source needs to be checked by user for GPT12 ISR**

User shall ensure that the intended GPT12 channel is the source of the interrupt to avoid unexpected/spurious interrupts.

[cover parentID MCU={EA111806-7E04-4e56-AD1A-AF63E5648682}]

- **Maximum STM compare duration**

User of the MCU (STM) shall ensure that the maximum compare duration does not exceed the 32-bit compare value.

1 Mcu driver

[cover parentID MCU={22FB290D-B9BC-41ca-81C8-A85E6AF795D5}]

- **Mcu_17_Gtm_ConnectTimerOutToPortPin shall not conflict with the configured TOUTs in GtmTimerPortPinSelect**

User shall ensure that Mcu_17_Gtm_ConnectTimerOutToPortPin shall not conflict with the configured TOUTs in GtmTimerPortPinSelect for respective TOM/ATOM channels.

[cover parentID MCU={F7EF2127-FF0D-4a52-949B-B52ECF8AE8AB}]

- **Provide correct configuration**

User shall provide the correct configuration values for the configuration parameters.

[cover parentID MCU={1E99EFD8-6D52-4be8-AF7E-8D6C82CC41D5}]

- **RAM section base address**

User shall provide the start address for the RAM section as per the natural memory alignment of the memory type.

[cover parentID MCU={4B92F5E7-BD7A-48eb-805C-8B7C525A3ED7}]

- **Sequence to enter the Sleep or Standby mode using the Mcu_SetMode API**

User shall ensure that when the MCU driver is programmed to enter into the sleep or standby mode where all the CPUs unanimously decide to enter the sleep or standby mode, the slave cores should enter the respective power down modes

first, with the master core being the last CPU to enter the power down mode.

[cover parentID MCU={2261FEE8-1D74-46f2-929C-BFA1A65A7541}]

- **Setting same trap again**

When the MculfxTrapApi configuration parameter is set to TRUE and the Mcu_SetTrapRequest() API is used for setting a trap, user shall ensure that the same trap cause is cleared before calling the Mcu_SetTrapRequest() API.

[cover parentID MCU={E2582802-9F0C-4794-9EC6-A30E801DFD95}]

- **SMU alarms with clock initialization**

User shall disable the SMU alarms relating to the clock tree before calling the Mcu_InitClock() and Mcu_DistributePllClock() APIs and re-configure to user setting after the successful execution of both the APIs. Alarms related to clock tree are as follows:

- ALM21[15] - PLLx/fSPB alive (where x: 0,1,2)
- ALM8[0] - OSC clock frequency out of range
- ALM8[1] - Back-up clock out-of-range alarm
- ALM8[2] - Back-up clock alive alarm
- ALM8[3] - System PLL DCO loss of lock event
- ALM8[4] - Peripheral PLL DCO loss of lock event

[cover parentID MCU={D10AE831-59F1-4bf4-A3D1-F41F9CED6C9B}]

- **Software reset configuration**

User shall ensure that when the Mcu_PerformReset API is called to perform software reset, the McuSWResetConf parameter shall not be configured as no reset.

[cover parentID MCU={34569091-6D4D-4789-BA0E-193A77598D5F}]

- **STM is enabled**

User of the MCAL shall ensure that the STM is enabled and not in the sleep mode before invoking any MCAL APIs.

1 Mcu driver

[cover parentID MCU={944C58EE-586A-49f6-8036-C206C63762E1}]

- **STM same configuration used for check and setup comparator**

User of the MCU (STM) shall provide same configuration for the SetupComparator() and CheckComparator() APIs.

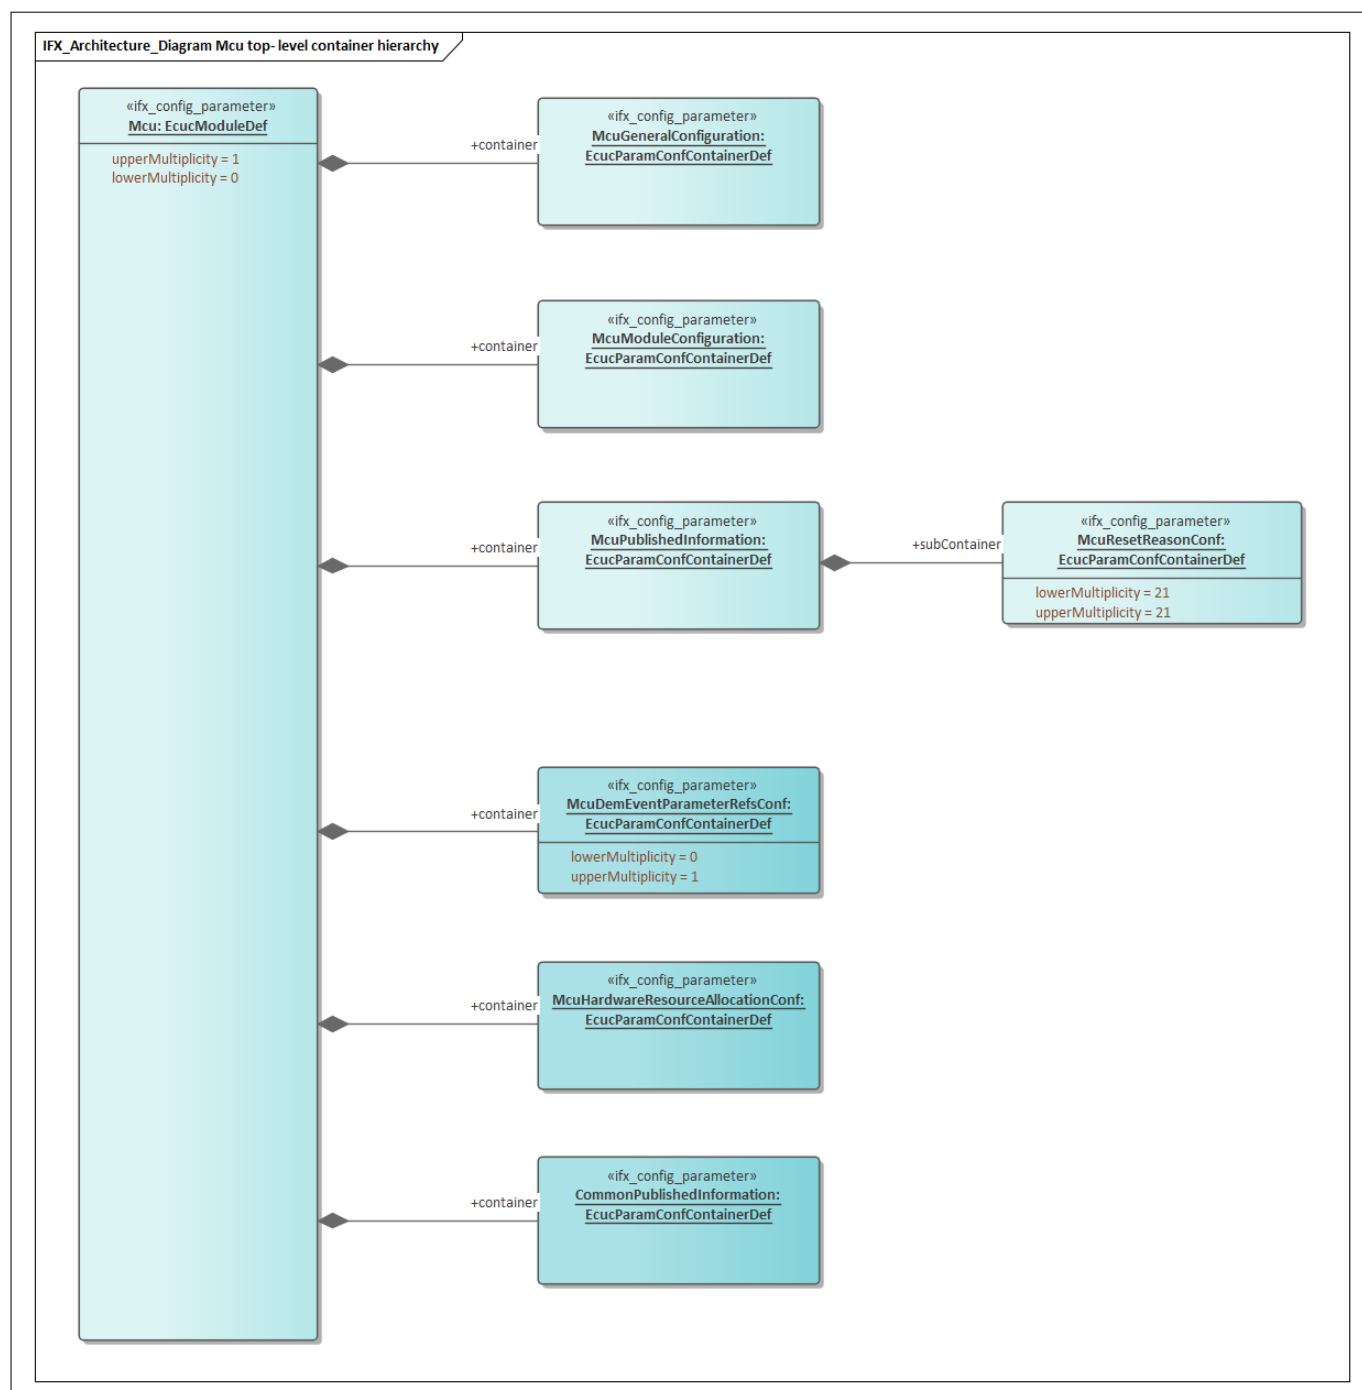

[cover parentID MCU={3BC33D10-04B2-4b7f-82E7-5F93FDB874E8}]

Post-Build Variant Multiplicity: -

Multiplicity Configuration Class: -

1.3.1.21.1 McuResetReason
Table 31 Specification for McuResetReason

Name	McuResetReason		
Description	Specifies the reset reason types available on the microcontroller. McuResetReason is microcontroller dependent and provided as fixed configuration which is non-modifiable by the user.		
Multiplicity	1..1	Type	EcucIntegerParamDef
Range	0 - 255		
Default value	8		
Post-build variant value	FALSE	Post-build variant multiplicity	-
Value configuration class	Published-Information	Multiplicity configuration class	-
Origin	AUTOSAR_ECUC	Scope	ECU
Dependency	-		
Autosar Version	Applicable for Autosar versions 4.2.2 and 4.4.0.		

1.3.1.22 Container: MCU_STM5_RESET

This container contains the configuration for the reset reason MCU_STM5_RESET

Post-Build Variant Multiplicity: -

Multiplicity Configuration Class: -

1.3.1.22.1 McuResetReason
Table 32 Specification for McuResetReason

Name	McuResetReason		
Description	Specifies the reset reason types available on the microcontroller. McuResetReason is microcontroller dependent and provided as fixed configuration which is non-modifiable by the user.		

(table continues...)

1 Mcu driver
Table 32 (continued) Specification for McuResetReason

Multiplicity	1..1	Type	EcucIntegerParamDef
Range	0 - 255		
Default value	9		
Post-build variant value	FALSE	Post-build variant multiplicity	-
Value configuration class	Published-Information	Multiplicity configuration class	-
Origin	AUTOSAR_ECUC	Scope	ECU
Dependency	-		
Autosar Version	Applicable for Autosar versions 4.2.2 and 4.4.0.		

1.3.1.23 Container: MCU_SUPPLY_WDOG_RESET

This container contains the configuration for the reset reason MCU_SUPPLY_WDOG_RESET

Post-Build Variant Multiplicity: -

Multiplicity Configuration Class: -

1.3.1.23.1 McuResetReason
Table 33 Specification for McuResetReason

Name	McuResetReason		
Description	Specifies the reset reason types available on the microcontroller. McuResetReason is microcontroller dependent and provided as fixed configuration which is non-modifiable by the user.		
Multiplicity	1..1	Type	EcucIntegerParamDef
Range	0 - 255		
Default value	16		
Post-build variant value	FALSE	Post-build variant multiplicity	-
Value configuration class	Published-Information	Multiplicity configuration class	-
Origin	AUTOSAR_ECUC	Scope	ECU
Dependency	-		
Autosar Version	Applicable for Autosar versions 4.2.2 and 4.4.0.		

1.3.1.24 Container: MCU_SW_RESET

This container contains the configuration for the reset reason MCU_SW_RESET

Post-Build Variant Multiplicity: -

1 Mcu driver

Multiplicity Configuration Class: -

1.3.1.24.1 McuResetReason
Table 34 Specification for McuResetReason

Name	McuResetReason		
Description	Specifies the reset reason types available on the microcontroller. McuResetReason is microcontroller dependent and provided as fixed configuration which is non-modifiable by the user.		
Multiplicity	1..1	Type	EcucIntegerParamDef
Range	0 - 255		
Default value	3		
Post-build variant value	FALSE	Post-build variant multiplicity	-
Value configuration class	Published-Information	Multiplicity configuration class	-
Origin	AUTOSAR_ECUC	Scope	ECU
Dependency	-		
Autosar Version	Applicable for Autosar versions 4.2.2 and 4.4.0.		

1.3.1.25 Container: CommonPublishedInformation

Container for common published information

Post-Build Variant Multiplicity: -

Multiplicity Configuration Class: -

1.3.1.25.1 ArMajorVersion
Table 35 Specification for ArMajorVersion

Name	ArMajorVersion		
Description	ArMajorVersion parameter provides the major version of the AUTOSAR specification.		
Multiplicity	1..1	Type	EcucIntegerParamDef
Range	0 - 255		
Default value	4		
Post-build variant value	FALSE	Post-build variant multiplicity	-
Value configuration class	Published-Information	Multiplicity configuration class	-
Origin	IFX	Scope	LOCAL

Dependency	-
Autosar Version	Applicable for Autosar versions 4.2.2 and 4.4.0.

1.3.1.25.2 ArMinorVersion
Table 36 Specification for ArMinorVersion

Name	ArMinorVersion		
Description	ArMinorVersion parameter provides the minor version of the AUTOSAR Specification.		
Multiplicity	1..1	Type	EcucIntegerParamDef
Range	0 - 255		
Default value	As per the selected Autosar version		
Post-build variant value	FALSE	Post-build variant multiplicity	-
Value configuration class	Published-Information	Multiplicity configuration class	-
Origin	IFX	Scope	LOCAL
Dependency	-		
Autosar Version	Applicable for Autosar versions 4.2.2 and 4.4.0.		

1.3.1.25.3 ArPatchVersion
Table 37 Specification for ArPatchVersion

Name	ArPatchVersion		
Description	ArPatchVersion parameter provides the patch version of the AUTOSAR Specification.		
Multiplicity	1..1	Type	EcucIntegerParamDef
Range	0 - 255		
Default value	As per the selected Autosar version		
Post-build variant value	FALSE	Post-build variant multiplicity	-
Value configuration class	Published-Information	Multiplicity configuration class	-
Origin	IFX	Scope	LOCAL
Dependency	-		
Autosar Version	Applicable for Autosar versions 4.2.2 and 4.4.0.		

1 Mcu driver
1.3.1.25.4 ModuleId
Table 38 Specification for ModuleId

Name	ModuleId		
Description	ModuleId provides the Module Id.		
Multiplicity	1..1	Type	EcucIntegerParamDef
Range	0 - 65535		
Default value	101		
Post-build variant value	FALSE	Post-build variant multiplicity	-
Value configuration class	Published-Information	Multiplicity configuration class	-
Origin	IFX	Scope	LOCAL
Dependency	-		
Autosar Version	Applicable for Autosar versions 4.2.2 and 4.4.0.		

1.3.1.25.5 Release
Table 39 Specification for Release

Name	Release		
Description	Release parameter provides the TC3xx derivative used for the implementation.		
Multiplicity	1..1	Type	EcucStringParamDef
Range	String		
Default value	As per HW derivative		
Post-build variant value	FALSE	Post-build variant multiplicity	-
Value configuration class	Published-Information	Multiplicity configuration class	-
Origin	IFX	Scope	LOCAL
Dependency	-		
Autosar Version	Applicable for Autosar versions 4.2.2 and 4.4.0.		

1.3.1.25.6 SwMajorVersion
Table 40 Specification for SwMajorVersion

Name	SwMajorVersion		
Description	SwMajorVersion provides the major version of the Software.		

(table continues...)

1 Mcu driver
Table 40 (continued) Specification for SwMajorVersion

Multiplicity	1..1	Type	EcucIntegerParamDef
Range	0 - 255		
Default value	As per driver version		
Post-build variant value	FALSE	Post-build variant multiplicity	-
Value configuration class	Published-Information	Multiplicity configuration class	-
Origin	IFX	Scope	LOCAL
Dependency	-		
Autosar Version	Applicable for Autosar versions 4.2.2 and 4.4.0.		

1.3.1.25.7 SwMinorVersion
Table 41 Specification for SwMinorVersion

Name	SwMinorVersion		
Description	SwMinorVersion provides the minor version of the Software.		
Multiplicity	1..1	Type	EcucIntegerParamDef
Range	0 - 255		
Default value	As per driver version		
Post-build variant value	FALSE	Post-build variant multiplicity	-
Value configuration class	Published-Information	Multiplicity configuration class	-
Origin	IFX	Scope	LOCAL
Dependency	-		
Autosar Version	Applicable for Autosar versions 4.2.2 and 4.4.0.		

1.3.1.25.8 SwPatchVersion
Table 42 Specification for SwPatchVersion

Name	SwPatchVersion		
Description	SwPatchVersion provides the patch version of the Software.		
Multiplicity	1..1	Type	EcucIntegerParamDef
Range	0 - 255		
Default value	As per driver version		

(table continues...)

1 Mcu driver

Value configuration class	Published-Information	Multiplicity configuration class	-
Origin	IFX	Scope	LOCAL
Dependency	-		
Autosar Version	Applicable for Autosar versions 4.2.2 and 4.4.0.		

1.3.1.25.9 VendorId
Table 43 Specification for VendorId

Name	VendorId		
Description	VendorId provides the Vendor Id.		
Multiplicity	1..1	Type	EcucIntegerParamDef
Range	0 - 65535		
Default value	17		
Post-build variant value	FALSE	Post-build variant multiplicity	-
Value configuration class	Published-Information	Multiplicity configuration class	-
Origin	IFX	Scope	LOCAL
Dependency	-		
Autosar Version	Applicable for Autosar versions 4.2.2 and 4.4.0.		

1.3.1.26 Container: GtmAtomActionTimeBaseUnitConf

This container holds the configuration parameters for the actual TBU setting. The action TBU setting is required to generate a trigger that can copy from shadow register to the actual registers for period, duty cycle and channel clock source.

Post-Build Variant Multiplicity: -

Multiplicity Configuration Class: -

1.3.1.26.1 GtmAtomActionTimeBaseSelection
Table 44 Specification for GtmAtomActionTimeBaseSelection

Name	GtmAtomActionTimeBaseSelection
Description	Specifies time base selected to compare with the value configured in GtmAtomActionTimeBaseValue.

(table continues...)

1 Mcu driver
Table 44 (continued) Specification for GtmAtomActionTimeBaseSelection

Multiplicity	1..1	Type	EcucEnumerationParamDef
Range	ATOM_ACT_TB_TBU_TS0: ATOM group level trigger is generated when GtmAtomActionTimeBaseValue matches TBU_TS0 ATOM_ACT_TB_TBU_TS1: ATOM group level trigger is generated when GtmAtomActionTimeBaseValue matches TBU_TS1 ATOM_ACT_TB_TBU_TS2: ATOM group level trigger is generated when GtmAtomActionTimeBaseValue matches TBU_TS2		
Default value	ATOM_ACT_TB_TBU_TS0		
Post-build variant value	TRUE	Post-build variant multiplicity	-
Value configuration class	Post-Build	Multiplicity configuration class	-
Origin	IFX	Scope	ECU
Dependency	-		
Autosar Version	Applicable for Autosar versions 4.2.2 and 4.4.0.		

1.3.1.26.2 GtmAtomActionTimeBaseValue
Table 45 Specification for GtmAtomActionTimeBaseValue

Name	GtmAtomActionTimeBaseValue		
Description	Specifies the time base value for the ATOM group channel level trigger. A trigger at the AGC level is raised when TBU_TS[x] (x can be selected through GtmAtomActionTimeBaseSelection) value matches the value configured in this configuration parameter. The trigger request has to be explicitly enabled by the user by setting the ATOM_AGC_ACT_TB.TB_TRIG bitfield.		
Multiplicity	1..1	Type	EcucIntegerParamDef
Range	1 - 16777215		
Default value	1		
Post-build variant value	TRUE	Post-build variant multiplicity	-
Value configuration class	Post-Build	Multiplicity configuration class	-
Origin	IFX	Scope	ECU
Dependency	-		
Autosar Version	Applicable for Autosar versions 4.2.2 and 4.4.0.		

1 Mcu driver
1.3.1.27 Container: GtmAtomChannelConf

This container holds the configuration parameters for ATOM channel- level parameters required to be configured globally. Therefore multiplicity is always 8.

The short name for the container shall be GtmAtomChannelConf_<x>, where x is an integer.

Note: The above naming convention is by default followed in Tresos, when new containers are added or when project is created.

Post-Build Variant Multiplicity: -

Multiplicity Configuration Class: -

1.3.1.27.1 GtmAtomChInternalTriggerEnable
Table 46 Specification for GtmAtomChInternalTriggerEnable

Name	GtmAtomChInternalTriggerEnable		
Description	<p>Enables/disables internal trigger from channel 0 of the corresponding group channel number.</p> <p>If a channel belongs to AGC0 (channel number 0 - 7), setting this configuration parameter for the corresponding channel enables the trigger from channel0.</p> <p>Values:</p> <p>TRUE: enable internal trigger from channel 0 tor 7 (based on the AGC a channel belong to)</p> <p>FALSE: disable internal trigger from channel 0 to 7 (based on the AGC a channel belong to)</p>		
Multiplicity	1..1	Type	EcucBooleanParamDef
Range	TRUE FALSE		
Default value	FALSE		
Post-build variant value	TRUE	Post-build variant multiplicity	-
Value configuration class	Post-Build	Multiplicity configuration class	-
Origin	IFX	Scope	ECU
Dependency	-		
Autosar Version	Applicable for Autosar versions 4.2.2 and 4.4.0.		

1.3.1.27.2 GtmAtomChResetCn0OnTriggerEnable
Table 47 Specification for GtmAtomChResetCn0OnTriggerEnable

Name	GtmAtomChResetCn0OnTriggerEnable
-------------	----------------------------------

(table continues...)

1 Mcu driver
Table 47 (continued) Specification for GtmAtomChResetCn0OnTriggerEnable

Description	Enables/disables the ATOM channel counter CN0 value that will be reset on global trigger from any of the trigger sources. Values: TRUE: resetting of ATOM channel CN0 on global trigger from any trigger source is enabled FALSE: resetting of ATOM channel CN0 on global trigger from any trigger source is disabled		
Multiplicity	1..1	Type	EcucBooleanParamDef
Range	TRUE FALSE		
Default value	FALSE		
Post-build variant value	TRUE	Post-build variant multiplicity	-
Value configuration class	Post-Build	Multiplicity configuration class	-
Origin	IFX	Scope	ECU
Dependency	-		
Autosar Version	Applicable for Autosar versions 4.2.2 and 4.4.0.		

1.3.1.27.3 GtmTimerPortPinSelect
Table 48 Specification for GtmTimerPortPinSelect

Name	GtmTimerPortPinSelect		
Description	Specifies the port pin to which the timer is connected.		
Multiplicity	1..1	Type	EcucEnumerationParamDef
Range	NONE: Timer is not connected to any port pin. TOUT[x]_SEL[y]_[i]_PORT[z]_PIN[q]: Specifies the TOUT connection for the timer. [x]: TOUT number (0-270) [y]: Selection (A-L) [i]: value corresponding to selection (0 - 11) [z]: Port number [q]: Pin number		
Default value	NONE		
Post-build variant value	TRUE	Post-build variant multiplicity	-
Value configuration class	Post-Build	Multiplicity configuration class	-

(table continues...)

1 Mcu driver
Table 48 (continued) Specification for GtmTimerPortPinSelect

Origin	IFX	Scope	LOCAL
Dependency	-		
Autosar Version	Applicable for Autosar versions 4.2.2 and 4.4.0.		

1.3.1.28 Container: GtmTimChannelConf

This container holds the configuration parameters for TIM channel- level parameters required to be configured globally. Therefore multiplicity is always 8.

The short name for the container shall be GtmTimChannelConf_<x>, where x is an integer.

Note: The above naming convention is by default followed in Tresos, when new containers are added or when project is created.

Post-Build Variant Multiplicity: -

Multiplicity Configuration Class: -

1.3.1.28.1 GtmTimInpPortPinSel
Table 49 Specification for GtmTimInpPortPinSel

Name	GtmTimInpPortPinSel		
Description	Parameter to configure the input port pin connection for TIM channels.		
Multiplicity	1..1	Type	EcucEnumerationParamDef
Range	SEL0_NONE: No input port pin is selected SEL[x]_PORT[y]_PIN[z]: Port[y] Pin[z] is selected as an input. [x]: value programmed in the register [y]: port number [z]: pin number		
Default value	SEL0_NONE		
Post-build variant value	TRUE	Post-build variant multiplicity	-
Value configuration class	Post-Build	Multiplicity configuration class	-
Origin	IFX	Scope	LOCAL
Dependency	-		
Autosar Version	Applicable for Autosar versions 4.2.2 and 4.4.0.		

1.3.1.29 Container: GtmAtomGlobalConf

This container holds the configuration parameters for ATOM global parameters. Various instances of ATOM channels can be used by ADC, PWM, GPT and WDG drivers and, therefore the global configuration for these channels within one ATOM group channel (AGC) is taken care of by this container.

1 Mcu driver

The short name for the container shall be GtmAtomGlobalConf_<x>, where x is an integer.

Note: The above naming convention is by default followed in Tresos, when new containers are added or when project is created.

Post-Build Variant Multiplicity: -

Multiplicity Configuration Class: -

1.3.1.30 Container: GtmAtomGroupConf

This container holds the configuration parameters for ATOM group channel parameters. ATOM module has one group and therefore the multiplicity is 1.

Post-Build Variant Multiplicity: -

Multiplicity Configuration Class: -

1.3.1.31 Container: GtmClusterConf

This container holds the cluster configuration. A cluster is organized as a set of GTM sub peripheral instances. As an example, cluster-0 contains one instance of (CMU, TBU, TOM0, ATOM0 TIM0 etc.). This container holds configuration parameters for all cluster configuration modules.

The short name for the container shall be GtmClusterConf_<x>, where x is an integer.

Note: The above naming convention is by default followed in Tresos, when new containers are added or when project is created.

Post-Build Variant Multiplicity: -

Multiplicity Configuration Class: -

1.3.1.31.1 GtmCmuClusterInputClockDividerEnable

Table 50 Specification for GtmCmuClusterInputClockDividerEnable

Name	GtmCmuClusterInputClockDividerEnable		
Description	<p>Enables/disables the dividing of fGTM to CMU.</p> <p>The configuration value CLS0_CLK_DIV defines the primary input clock period for CMU.</p> <p>If CLS0_CLK_DIV is configured to a value 0b10 (that is clock divider 2), the maximum CMU clock frequency for all other cluster c=1..n is also limited to the configured CMU clock frequency of cluster 0.</p> <p><i>Note: For the clusters greater than 4, (only 100 MHz capable), the allowed settings for the CLS_CLK_DIV are 00 and 10 (clock divider 2).</i></p>		
Multiplicity	1..1	Type	EcucEnumerationParamDef
Range	<p>CLS_CLK_CFG_DISABLED_SEL0: cluster x is disabled</p> <p>CLS_CLK_CFG_ENABLED_WITHOUT_DIV_SEL1: cluster x is enabled without clock divider</p> <p>CLS_CLK_CFG_ENABLED_WITH_DIV_SEL2: cluster x is enabled with clock divider</p>		
Default value	CLS_CLK_CFG_ENABLED_WITH_DIV_SEL2		

(table continues...)

1.3.1.38.5 GtmTbuChannelEnable
Table 92 Specification for GtmTbuChannelEnable

Name	GtmTbuChannelEnable		
Description	<p>Defines if TBU channels are enabled.</p> <p>All other configuration parameters specific to the TBU channel are disabled if this configuration parameter is set to FALSE.</p> <p>Values:</p> <p>TRUE: Channel is enabled</p> <p>FALSE: Channel is disabled</p>		
Multiplicity	1..1	Type	EcucBooleanParamDef
Range	TRUE FALSE		
Default value	FALSE		
Post-build variant value	TRUE	Post-build variant multiplicity	-
Value configuration class	Post-Build	Multiplicity configuration class	-
Origin	IFX	Scope	ECU
Dependency	-		
Autosar Version	Applicable for Autosar versions 4.2.2 and 4.4.0.		

1.3.1.39 Container: GtmTomActionTimeBaseUnitConf

This container holds the configuration parameters for the actual TBU setting. The action TBU setting is required to generate a trigger that can copy from shadow register to the actual registers for period, duty cycle and channel clock source .

Post-Build Variant Multiplicity: -

Multiplicity Configuration Class: -

1 Mcu driver
1.3.1.39.1 GtmTomActionTimeBaseSelection
Table 93 Specification for GtmTomActionTimeBaseSelection

Name	GtmTomActionTimeBaseSelection		
Description	Specifies the time base selected to compare with the value configured in GtmTomActionTimeBaseValue.		
Multiplicity	1..1	Type	EcucEnumerationParamDef
Range	TOM_ACT_TB_TBU_TS0: TOM group level trigger is generated when GtmTomActionTimeBaseValue matches TBU_TS0 TOM_ACT_TB_TBU_TS1: TOM group level trigger is generated when GtmTomActionTimeBaseValue matches TBU_TS1 TOM_ACT_TB_TBU_TS2: TOM group level trigger is generated when GtmTomActionTimeBaseValue matches TBU_TS2		
Default value	TOM_ACT_TB_TBU_TS0		
Post-build variant value	TRUE	Post-build variant multiplicity	-
Value configuration class	Post-Build	Multiplicity configuration class	-
Origin	IFX	Scope	ECU
Dependency	-		
Autosar Version	Applicable for Autosar versions 4.2.2 and 4.4.0.		

1.3.1.39.2 GtmTomActionTimeBaseValue
Table 94 Specification for GtmTomActionTimeBaseValue

Name	GtmTomActionTimeBaseValue		
Description	Specifies the time base value for the TOM group channel level trigger. A trigger at the TGC level is raised when TBU_TS[x] (x can be selected through GtmActionTimeBaseSelection) value matches the value configured in this configuration parameter. The trigger request has to be explicitly enabled by the user by setting the TOM_TGC_ACT_TB.TB_TRIG bitfield.		
Multiplicity	1..1	Type	EcucIntegerParamDef
Range	1 - 16777215		
Default value	1		
Post-build variant value	TRUE	Post-build variant multiplicity	-

Autosar Version	Applicable for Autosar versions 4.2.2 and 4.4.0.		

1.3.1.41 Container: GtmTimGlobalConf

This container holds the configuration parameters for the TIM global parameters.

The short name for the container shall be GtmTimGlobalConf_<x>, where x is an integer.

Note: The above naming convention is by default followed in Tresos, when new containers are added or when project is created.

Post-Build Variant Multiplicity: -

Multiplicity Configuration Class: -

1.3.1.42 Container: GtmTomGlobalConf

This container holds the configuration parameters for the TOM global parameters. Various instances of TOM channels can be used by the ADC, PWM, GPT and WDG drivers and hence the global configuration for these channels within one TOM group channel (TGC) is taken care of by this container.

The short name for the container shall be GtmTomGroupConf_<x>, where x is an integer.

Note: The above naming convention is by default followed in Tresos, when new containers are added or when project is created.

Post-Build Variant Multiplicity: -

Multiplicity Configuration Class: -

1.3.1.43 Container: GtmTomGroupConf

This container contains the configuration (parameters) for the GTM TOM group settings

Post-Build Variant Multiplicity: -

Multiplicity Configuration Class: -

1.3.1.44 Container: GtmTriggerForAdc

This container defines the binding between the GTM timers and the ADC trigger lines

1.3.1.50.2 McuClockReferencePointFrequency
Table 111 Specification for McuClockReferencePointFrequency

Name	McuClockReferencePointFrequency		
Description	Defines the frequency for the specific instance of the McuClockReferencePoint container. The frequency is always expressed in Hertz (Hz). The frequency is already calculated in Infineon defined containers. The value entered here by the user will not be validated and is only for information purpose.		
Multiplicity	1..1	Type	EcucFloatParamDef
Range	0 - 320000000		
Default value	0		
Post-build variant value	TRUE	Post-build variant multiplicity	-
Value configuration class	Post-Build	Multiplicity configuration class	-
Origin	AUTOSAR_ECUC	Scope	ECU
Dependency	McuClockRefSelection		
Autosar Version	Applicable for Autosar versions 4.2.2 and 4.4.0.		

1.3.1.51 Container: McuClockReferencePointConfig

This container holds sub-container for the configuration of the MCU clock tree.

Post-Build Variant Multiplicity: -

Multiplicity Configuration Class: -

1.3.1.52 Container: McuClockSettingConfig

This container contains the configuration (parameters) for the clock settings of the MCU.

Post-Build Variant Multiplicity: FALSE

Multiplicity Configuration Class: Pre-Compile

Range	0 - 255		
Default value	0		
Post-build variant value	FALSE	Post-build variant multiplicity	-
Value configuration class	Pre-Compile	Multiplicity configuration class	-
Origin	AUTOSAR_ECUC	Scope	LOCAL
Dependency	-		
Autosar Version	Applicable for Autosar versions 4.2.2 and 4.4.0.		

1.3.1.53 Container: McuDemEventParameterRefs

This is a container for the references to the DemEventParameter elements which are invoked using the Mcal_Wrapper_Dem_ReportErrorStatus() API for AS422 and Mcal_Wrapper_Dem_SetEventStatus() API for AS440 in case the corresponding errors occur. The EventId is taken from the referenced DemEventParameter's DemEventId symbolic name. The standardized errors are provided in the container and can be extended by vendor-specific error references.

Post-Build Variant Multiplicity: FALSE

Multiplicity Configuration Class: Pre-Compile

1.3.1.53.1 MCU_E_CLOCK_FAILURE
Table 113 Specification for MCU_E_CLOCK_FAILURE

Name	MCU_E_CLOCK_FAILURE		
Description	Provides the provision to enable or disable the production error event on clock failure reported through Mcal_Wrapper. This configuration container is kept disabled, just to conform to AUTOSAR schema model.		
Multiplicity	0..1	Type	EcucSymbolicNameReferenceDef
Range	Reference to Node: DemEventParameter		
Default value	NULL		
Post-build variant value	FALSE	Post-build variant multiplicity	FALSE

1 Mcu driver
Table 139 (continued) Specification for McuCcu60SleepModeEnabled

Description	Specifies whether CCU6 kernel 0 is configured to go to sleep or not. TRUE: CCU6 kernel 0 will go to sleep when system is put to sleep FALSE: CCU6 kernel 0 will not go to sleep when system is put to sleep		
Multiplicity	1..1	Type	EcucBooleanParamDef
Range	TRUE FALSE		
Default value	FALSE		
Post-build variant value	FALSE	Post-build variant multiplicity	-
Value configuration class	Pre-Compile	Multiplicity configuration class	-
Origin	IFX	Scope	LOCAL
Dependency	-		
Autosar Version	Applicable for Autosar versions 4.2.2 and 4.4.0.		

1.3.1.60.3 McuClearColdResetStatusApi
Table 140 Specification for McuClearColdResetStatusApi

Name	McuClearColdResetStatusApi		
Description	Pre-processor switch to enable/disable the Mcu_ClearColdResetStatus() API. Values: TRUE: enables Mcu_ClearColdResetStatus FALSE: disables Mcu_ClearColdResetStatus		
Multiplicity	1..1	Type	EcucBooleanParamDef
Range	TRUE FALSE		
Default value	FALSE		
Post-build variant value	FALSE	Post-build variant multiplicity	-
Value configuration class	Pre-Compile	Multiplicity configuration class	-
Origin	IFX	Scope	LOCAL
Dependency	-		
Autosar Version	Applicable for Autosar versions 4.2.2 and 4.4.0.		

1 Mcu driver
1.3.1.60.4 McuClockSourceFailureNotification
Table 141 Specification for McuClockSourceFailureNotification

Name	McuClockSourceFailureNotification		
Description	Clock failure related production errors are reported to the application when this parameter is enabled. Values: TRUE: Clock failure-related production errors are reported FALSE: Clock failure-related production errors are not reported		
Multiplicity	1..1	Type	EcucBooleanParamDef
Range	TRUE FALSE		
Default value	FALSE		
Post-build variant value	FALSE	Post-build variant multiplicity	-
Value configuration class	Pre-Compile	Multiplicity configuration class	-
Origin	IFX	Scope	LOCAL
Dependency	-		
Autosar Version	Applicable for Autosar versions 4.2.2 and 4.4.0.		

1.3.1.60.5 McuDevErrorDetect
Table 142 Specification for McuDevErrorDetect

Name	McuDevErrorDetect		
Description	Pre-processor switch for enabling the development error detection and reporting. Values: TRUE: Development error detection is enabled FALSE: Development error detection is disabled		
Multiplicity	1..1	Type	EcucBooleanParamDef
Range	TRUE FALSE		
Default value	FALSE		
Post-build variant value	FALSE	Post-build variant multiplicity	-

1.3.1.62 Container: McuGtmAllocationConf

This container holds the ownership information of the sub-modules of GTM peripherals such as TOM, ATOM and TIM. The number of instances of the TIM, TOM and ATOM container depends on the underlying derivative.

The short name for the container shall be McuGtmAllocationConf_<x>, where x is an integer.

Note: The above naming convention is by default followed in Tresos, when new containers are added or when project is created.

Post-Build Variant Multiplicity: -

Multiplicity Configuration Class: -

1.3.1.63 Container: McuGtmAtomAllocationConf

This container holds the GTM ATOM allocation. Multiplicity of this container depends on the underlying derivative.

User is not allowed to change the name of the parameters in this container.

Post-Build Variant Multiplicity: -

Multiplicity Configuration Class: -

1.3.1.64 Container: McuGtmAtomChannelAllocationConf

This container holds the GTM ATOM channel allocation.

Post-Build Variant Multiplicity: -

Table 274 Specification for McuVextStdbyCtrl

Name	McuVextStdbyCtrl		
Description	Specifies if the API Mcu_VextStdbyCtrl is available or not McuVextStdbyCtrl is applicable only if McuMode is 2 (STANDBY). Values: TRUE: API Mcu_VextStdbyCtrl is available. FALSE: API Mcu_VextStdbyCtrl is not available.		
Multiplicity	1..1	Type	EcucBooleanParamDef
Range	TRUE FALSE		
Default value	FALSE		
Post-build variant value	TRUE	Post-build variant multiplicity	-
Value configuration class	Post-Build	Multiplicity configuration class	-
Origin	IFX	Scope	LOCAL
Dependency	McuMode		
Autosar Version	Applicable for Autosar versions 4.2.2 and 4.4.0.		

1.3.1.85 Container: McuSystemPllSettingConfig

This container holds the configuration (parameters) for the System PLL clock settings.

Post-Build Variant Multiplicity: -

Multiplicity Configuration Class: -

1.3.1.85.1 McuClockReferencePointFrequency0
Table 275 Specification for McuClockReferencePointFrequency0

Name	McuClockReferencePointFrequency0
-------------	----------------------------------

(table continues...)

1 Mcu driver
Table 275 (continued) Specification for McuClockReferencePointFrequency0

Description	<p>User should configure the resulting target frequency after configuring the N, P and K2 divider for system PLL.</p> <p>By using the default value generation option this frequency can be auto-calculated with the configured values of McuMainOscillatorFrequency, McuSystemPlIPDivider, McuSystemPlINDivider, and McuSystemPlIK2Divider dividers. Unit is expressed in Hz.</p> <p>The McuClockReferencePointFrequency0 for NORMAL_MODE should be in the range from: 20 to 300 MHz. If McuClockDistributionInpClockSel is selected as BACKUP_INPUT_CLOCK_SRC_SELECT then manually configure this clock to Fback = 100 MHz.</p> <p>fSOURCE0 is McuClockReferencePointFrequency0.</p>		
Multiplicity	1..1	Type	EcucFloatParamDef
Range	20000000.0 - 300000000.0		
Default value	300000000.0		
Post-build variant value	TRUE	Post-build variant multiplicity	-
Value configuration class	Post-Build	Multiplicity configuration class	-
Origin	IFX	Scope	LOCAL
Dependency	McuMainOscillatorFrequency, McuSystemPlIK2Divider, McuSystemPlINDivider, McuSystemPlIPDivider, McuPlIInputSrcSelection		
Autosar Version	Applicable for Autosar versions 4.2.2 and 4.4.0.		

1.3.1.85.2 McuFMPlModAmp
Table 276 Specification for McuFMPlModAmp

Name	McuFMPlModAmp		
Description	<p>McuFMPlModAmp is the percentage value for modulation amplitude for PLL frequency modulation.</p> <p>MODCFG[9:0] bits of SCU_SYSPLLCON2 is used and is equated as</p> $= (64 * \text{McuFMPlModAmp} / 100 * \text{McuMainOscillatorFrequency} / \text{McuPlIPDivider} * \text{McuPlINDivider} / 3.6) ;$ <p>where (McuFMPlModAmp is expressed in percentage and McuMainOscillatorFrequency in MHz).</p>		
Multiplicity	1..1	Type	EcucFloatParamDef
Range	0.0 - 2.0		
Default value	1.25		
Post-build variant value	TRUE	Post-build variant multiplicity	-

(table continues...)

1 Mcu driver

1.3.2 Functions - Type definitions

This section lists all the data type of the MCU driver.

1.3.2.1 Mcu_17_Ccu6_TimerChIntType
Table 324 Specification for Mcu_17_Ccu6_TimerChIntType

Syntax	Mcu_17_Ccu6_TimerChIntType	
Type	Structure	
File	Mcu_17_TimerIp.h	
Range	Mcu_17_Ccu6_TimerChIdentifierType TimerId	CCU6 Timer Id
	uint32 IEnBitPos	Bit position of interrupt to be enabled
	uint32 IEnLen	Length of interrupt to be enabled
	uint32 RegVal	Value to be written in register
Description	Data type for configuring interrupts in CCU6.	
Source	IFX	
Autosar Version	Applicable for Autosar versions 4.2.2 and 4.4.0.	

1 Mcu driver
1.3.2.2 Mcu_17_Eru_SrcIdentifierType
Table 325 Specification for Mcu_17_Eru_SrcIdentifierType

Syntax	Mcu_17_Eru_SrcIdentifierType	
Type	uint8	
File	Mcu_17_TimerIp.h	
Range	0-255	Range of uint8
Description	Data type for user of ERU.	
Source	IFX	
Autosar Version	Applicable for Autosar versions 4.2.2 and 4.4.0.	

1.3.2.3 Mcu_17_Gpt12_ClkPrescalarType
Table 326 Specification for Mcu_17_Gpt12_ClkPrescalarType

Syntax	Mcu_17_Gpt12_ClkPrescalarType	
Type	uint8	
File	Mcu_17_TimerIp.h	
Range	0 - MCU_GPT12_GPT1_CLOCK_DIV8	GPT1 block clock divider 8
	1 - MCU_GPT12_GPT1_CLOCK_DIV4	GPT1 block clock divider 4
	2 - MCU_GPT12_GPT1_CLOCK_DIV32	GPT1 block clock divider 32
	3 - MCU_GPT12_GPT1_CLOCK_DIV16	GPT1 block clock divider 16
	0 - MCU_GPT12_GPT2_CLOCK_DIV4	GPT2 block clock divider 4
	1 - MCU_GPT12_GPT2_CLOCK_DIV2	GPT2 block clock divider 2
	2 - MCU_GPT12_GPT2_CLOCK_DIV16	GPT2 block clock divider 16
	3 - MCU_GPT12_GPT2_CLOCK_DIV8	GPT2 block clock divider 8
Description	This type indicates clock divider value for fGPT for a particular block.	
Source	IFX	
Autosar Version	Applicable for Autosar versions 4.2.2 and 4.4.0.	

1.3.2.4 Mcu_17_Gpt12_TimerBlockType
Table 327 Specification for Mcu_17_Gpt12_TimerBlockType

Syntax	Mcu_17_Gpt12_TimerBlockType	
Type	uint8	
File	Mcu_17_TimerIp.h	
Range	MCU_GPT12_GPT1_BLOCK	GPT1 block
	MCU_GPT12_GPT2_BLOCK	GPT2 block
Description	This type indicates whether the GPT timer block is - GPT1 or GPT2.	

(table continues...)

1 Mcu driver
Table 327 (continued) Specification for Mcu_17_Gpt12_TimerBlockType

Source	IFX
Autosar Version	Applicable for Autosar versions 4.2.2 and 4.4.0.

1.3.2.5 Mcu_17_Gtm_AtomCh
Table 328 Specification for Mcu_17_Gtm_AtomCh

Syntax	Mcu_17_Gtm_AtomCh	
Type	Structure	
File	Mcu_17_TimerIp.h	
Range	Ifx_GTM_ATOM_CH CH	ATOM channels
	uint8 Reserved1[20]	Reserved bits
Description	Structure of ATOM channels.	
Source	IFX	
Autosar Version	Applicable for Autosar versions 4.2.2 and 4.4.0.	

1.3.2.6 Mcu_17_Gtm_AtomChArray
Table 329 Specification for Mcu_17_Gtm_AtomChArray

Syntax	Mcu_17_Gtm_AtomChArray	
Type	Structure	
File	Mcu_17_TimerIp.h	
Range	Mcu_17_Gtm_AtomCh ATOM_CHANNEL[8]	ATOM channel array
Description	Array of size of number of ATOM channels.	
Source	IFX	
Autosar Version	Applicable for Autosar versions 4.2.2 and 4.4.0.	

1.3.2.7 Mcu_17_Gtm_MappedPortTimerOutType
Table 330 Specification for Mcu_17_Gtm_MappedPortTimerOutType

Syntax	Mcu_17_Gtm_MappedPortTimerOutType	
Type	uint8	
File	Mcu_17_TimerIp.h	
Range	0-MCU_OUT_TIMER_MAPPED_COL_A	Timer output mapped to column A
	1-MCU_OUT_TIMER_MAPPED_COL_B	Timer output mapped to column B
	2-MCU_OUT_TIMER_MAPPED_COL_C	Timer output mapped to column C
	3-MCU_OUT_TIMER_MAPPED_COL_D	Timer output mapped to column D

(table continues...)

1 Mcu driver
Table 330 (continued) Specification for Mcu_17_Gtm_MappedPortTimerOutType

	4-MCU_OUT_TIMER_MAPPED_COL_E	Timer output mapped to column E
	5-MCU_OUT_TIMER_MAPPED_COL_F	Timer output mapped to column F
	6-MCU_OUT_TIMER_MAPPED_COL_G	Timer output mapped to column G
	7-MCU_OUT_TIMER_MAPPED_COL_H	Timer output mapped to column H
	8-MCU_OUT_TIMER_MAPPED_COL_I	Timer output mapped to column I
	9-MCU_OUT_TIMER_MAPPED_COL_J	Timer output mapped to column J
	10-MCU_OUT_TIMER_MAPPED_COL_K	Timer output mapped to column K
	11-MCU_OUT_TIMER_MAPPED_COL_L	Timer output mapped to column L
Description	Mcu_17_Gtm_MappedPortTimerOutType defines the column series to connect the GTM timers TOM/ATOM to port pins.	
Source	IFX	
Autosar Version	Applicable for Autosar versions 4.2.2 and 4.4.0.	

1.3.2.8 Mcu_17_Gtm_TimCh
Table 331 Specification for Mcu_17_Gtm_TimCh

Syntax	Mcu_17_Gtm_TimCh	
Type	Structure	
File	Mcu_17_TimerIp.h	
Range	Ifx_GTM_TIM_CH CH	TIM channel
	uint8 Reserved1[64]	Reserved bits
Description	Structure of TIM channels.	
Source	IFX	
Autosar Version	Applicable for Autosar versions 4.2.2 and 4.4.0.	

1.3.2.9 Mcu_17_Gtm_TimChArray
Table 332 Specification for Mcu_17_Gtm_TimChArray

Syntax	Mcu_17_Gtm_TimChArray	
Type	Structure	
File	Mcu_17_TimerIp.h	
Range	Mcu_17_Gtm_TimCh TIM_CHANNEL[8]	TIM channel array
Description	Array of size of number of TIM channels.	
Source	IFX	
Autosar Version	Applicable for Autosar versions 4.2.2 and 4.4.0.	

1 Mcu driver
1.3.2.10 Mcu_17_Gtm_TimerEnableType
Table 333 Specification for Mcu_17_Gtm_TimerEnableType

Syntax	Mcu_17_Gtm_TimerEnableType	
Type	uint8	
File	Mcu_17_TimerIp.h	
Range	MCU_GTM_TIMER_DISABLE	GTM Timer is disabled
	MCU_GTM_TIMER_ENABLE	GTM Timer is enabled
Description	This type identifies if the GTM output timer is either enabled or disabled.	
Source	IFX	
Autosar Version	Applicable for Autosar versions 4.2.2 and 4.4.0.	

1.3.2.11 Mcu_17_Gtm_TimerEnTriggerType
Table 334 Specification for Mcu_17_Gtm_TimerEnTriggerType

Syntax	Mcu_17_Gtm_TimerEnTriggerType	
Type	Enumeration	
File	Mcu_17_TimerIp.h	
Range	0 - MCU_NOCHANGE_ON_TRIGGER	No change on trigger
	1 - MCU_DISABLE_ON_TRIGGER	Disable on trigger
	2 - MCU_ENABLE_ON_TRIGGER	Enable on trigger
Description	Data type for enabling channel on trigger.	
Source	IFX	
Autosar Version	Applicable for Autosar versions 4.2.2 and 4.4.0.	

1.3.2.12 Mcu_17_Gtm_TimerOutputEnableType
Table 335 Specification for Mcu_17_Gtm_TimerOutputEnableType

Syntax	Mcu_17_Gtm_TimerOutputEnableType	
Type	uint8	
File	Mcu_17_TimerIp.h	
Range	MCU_GTM_TIMER_OUT_DISABLE	Disable timer output
	MCU_GTM_TIMER_OUT_ENABLE	Enable timer output
Description	This type indicates if the timer output is connected or not to the rest of the controller.	
Source	IFX	
Autosar Version	Applicable for Autosar versions 4.2.2 and 4.4.0.	

1 Mcu driver
1.3.2.13 Mcu_17_Gtm_TimerOutputEnTriggerType
Table 336 Specification for Mcu_17_Gtm_TimerOutputEnTriggerType

Syntax	Mcu_17_Gtm_TimerOutputEnTriggerType	
Type	Enumeration	
File	Mcu_17_TimerIp.h	
Range	0 - MCU_NOCHANGE_OUT_ON_TRIGGER	No change in output on trigger
	1 - MCU_DISABLE_OUT_ON_TRIGGER	Disable output on trigger
	2 - MCU_ENABLE_OUT_ON_TRIGGER	Enable output on trigger
Description	Data type for enabling the timer output on a trigger.	
Source	IFX	
Autosar Version	Applicable for Autosar versions 4.2.2 and 4.4.0.	

1.3.2.14 Mcu_17_Gtm_TimerUpdateEnableType
Table 337 Specification for Mcu_17_Gtm_TimerUpdateEnableType

Syntax	Mcu_17_Gtm_TimerUpdateEnableType	
Type	uint8	
File	Mcu_17_TimerIp.h	
Range	MCU_GTM_TIMER_UPDATE_DISABLE	GTM Timer update is disabled
	MCU_GTM_TIMER_UPDATE_ENABLE	GTM Timer update is enabled
Description	Mcu_17_Gtm_TimerUpdateEnableType specifies whether timer update is enabled or disabled.	
Source	IFX	
Autosar Version	Applicable for Autosar versions 4.2.2 and 4.4.0.	

1.3.2.15 Mcu_17_Gtm_TomCh
Table 338 Specification for Mcu_17_Gtm_TomCh

Syntax	Mcu_17_Gtm_TomCh	
Type	Structure	
File	Mcu_17_TimerIp.h	
Range	Ifx_GTM_TOM_CH CH	TOM channels
	uint8 Reserved1[20]	Reserved bits
Description	Structure of TOM channels.	
Source	IFX	
Autosar Version	Applicable for Autosar versions 4.2.2 and 4.4.0.	

1 Mcu driver
1.3.2.16 Mcu_17_Gtm_TomChArray
Table 339 Specification for Mcu_17_Gtm_TomChArray

Syntax	Mcu_17_Gtm_TomChArray	
Type	Structure	
File	Mcu_17_TimerIp.h	
Range	Mcu_17_Gtm_TomCh TOM_CHANNEL[16]	Tom channel array
Description	Array of size of number of TOM channels.	
Source	IFX	
Autosar Version	Applicable for Autosar versions 4.2.2 and 4.4.0.	

1.3.2.17 Mcu_17_Gtm_TomTgc
Table 340 Specification for Mcu_17_Gtm_TomTgc

Syntax	Mcu_17_Gtm_TomTgc	
Type	Structure	
File	Mcu_17_TimerIp.h	
Range	Ifx_GTM_TOM_TGC_GLB_CTRL TGC_GLB_CTRL	TOM global control
	Ifx_GTM_TOM_TGC_ACT_TB TGC_ACT_TB	TOM time base
	Ifx_GTM_TOM_TGC_FUPD_CTRL TGC_FUPD_CTRL	TOM force update control
	Ifx_GTM_TOM_TGC_INT_TRIG TGC_INT_TRIG	Internal trigger
	uint8 Reserved2[48]	Reserved bits
	Ifx_GTM_TOM_TGC_ENDIS_CTRL TGC_ENDIS_CTRL	Enable/disable control
	Ifx_GTM_TOM_TGC_ENDIS_STAT TGC_ENDIS_STAT	Enable/disable status
	Ifx_GTM_TOM_TGC_OUTEN_CTRL TGC_OUTEN_CTRL	TOM output enable control
	Ifx_GTM_TOM_TGC_OUTEN_STAT TGC_OUTEN_STAT	TOM output enable status
	uint8 Reserved3[432]	None
Description	Data type for TOM TGC.	
Source	IFX	
Autosar Version	Applicable for Autosar versions 4.2.2 and 4.4.0.	

1 Mcu driver
1.3.2.18 Mcu_17_Gtm_TomTgcArray
Table 341 Specification for Mcu_17_Gtm_TomTgcArray

Syntax	Mcu_17_Gtm_TomTgcArray	
Type	Structure	
File	Mcu_17_TimerIp.h	
Range	uint8 Reserved1[48]	Reserved bits
	Mcu_17_Gtm_TomTgc TOM_TGC	TOM global control register
Description	Array of type of TOM TGC.	
Source	IFX	
Autosar Version	Applicable for Autosar versions 4.2.2 and 4.4.0.	

1.3.2.19 Mcu_17_Stm_ComIntEnableType
Table 342 Specification for Mcu_17_Stm_ComIntEnableType

Syntax	Mcu_17_Stm_ComIntEnableType	
Type	uint8	
File	Mcu_17_TimerIp.h	
Range	0-255	Range of uint8
Description	Data type for interrupt of STM compare match.	
Source	IFX	
Autosar Version	Applicable for Autosar versions 4.2.2 and 4.4.0.	

1.3.2.20 Mcu_17_Stm_StmCmplIdentifierType
Table 343 Specification for Mcu_17_Stm_StmCmplIdentifierType

Syntax	Mcu_17_Stm_StmCmplIdentifierType	
Type	uint8	
File	Mcu_17_TimerIp.h	
Range	0-255	Range of Uint8
Description	Data type to identify STM comparator type.	
Source	IFX	
Autosar Version	Applicable for Autosar versions 4.2.2 and 4.4.0.	

1.3.2.21 Mcu_17_Stm_StmIdentifierType
Table 344 Specification for Mcu_17_Stm_StmIdentifierType

Syntax	Mcu_17_Stm_StmIdentifierType
---------------	------------------------------

(table continues...)

1 Mcu driver
Table 344 (continued) Specification for Mcu_17_Stm_StmIdentifierType

Type	uint32	
File	Mcu_17_TimerIp.h	
Range	0-4294967295	Range of uint32
Description	Data type for STM timers.	
Source	IFX	
Autosar Version	Applicable for Autosar versions 4.2.2 and 4.4.0.	

1.3.2.22 Mcu_17_Stm_TimerConfigType
Table 345 Specification for Mcu_17_Stm_TimerConfigType

Syntax	Mcu_17_Stm_TimerConfigType	
Type	Structure	
File	Mcu_17_TimerIp.h	
Range	uint32 CompareRegVal	Compare register value
	unsigned_int StmTimerId	STM Timer
	unsigned_int CMPRegId	Compare register ID
	unsigned_int CmconRegVal	Compare match control register value
	unsigned_int reserved	Reserved
Description	Configuration structure for STM configuration.	
Source	IFX	
Autosar Version	Applicable for Autosar versions 4.2.2 and 4.4.0.	

1.3.2.23 Mcu_17_Timer_CallbackFuncPtrType
Table 346 Specification for Mcu_17_Timer_CallbackFuncPtrType

Syntax	Mcu_17_Timer_CallbackFuncPtrType
Type	Pointer to a function of type void Function_Name (const uint32 Channel, const uint32 Flags)
File	Mcu_17_TimerIp.h
Description	Function pointer type for the call back functions, associated with TIM/TOM/ATOM. The input parameter for the callback function is the logical channel ID of the GTM timer channel.
Source	IFX
Autosar Version	Applicable for Autosar versions 4.2.2 and 4.4.0.

1 Mcu driver
1.3.2.24 Mcu_RamStateType
Table 347 Specification for Mcu_RamStateType

Syntax	Mcu_RamStateType	
Type	Enumeration	
File	Mcu.h	
Range	0 - MCU_RAMSTATE_INVALID	Ram contents got corrupted in last power down.
	1 - MCU_RAMSTATE_VALID	Ram contents are valid after last power down.
Description	Return type for Mcu_GetRamState. MCU_RAMSTATE_INVALID: RAM contents got corrupted MCU_RAMSTATE_VALID: RAM contents are valid	
Source	AUTOSAR	
Autosar Version	Applicable for Autosar versions 4.2.2 and 4.4.0.	

1.3.2.25 Mcu_CpuIdType
Table 348 Specification for Mcu_CpuIdType

Syntax	Mcu_CpuIdType	
Type	Enumeration	
File	Mcu.h	
Range	0 - MCU_CPU0	CPU0 identifier
	1 - MCU_CPU1	CPU1 identifier
	2 - MCU_CPU2	CPU2 identifier
	3 - MCU_CPU3	CPU3 identifier
	4 - MCU_CPU4	CPU4 identifier
	5 - MCU_CPU5	CPU5 identifier
Description	Identification for CPU core id.	
Source	IFX	
Autosar Version	Applicable for Autosar versions 4.2.2 and 4.4.0.	

1.3.2.26 Mcu_CpuModeType
Table 349 Specification for Mcu_CpuModeType

Syntax	Mcu_CpuModeType	
Type	Enumeration	
File	Mcu.h	

(table continues...)

1 Mcu driver
Table 349 (continued) Specification for Mcu_CpuModeType

Range	1 - MCU_CPU_NORMAL_MODE	CPU is in normal state.
	2 - MCU_CPU_IDLE_MODE_REQ	CPU is in idle mode requested state.
	3 - MCU_CPU_IDLE_MODE_ACK	CPU is in idle mode acknowledged state.
	4 - MCU_CPU_SLEEP_MODE_REQ	CPU is in sleep mode requested state
	6 - MCU_CPU_STBY_MODE_REQ	CPU is in standby mode requested state
	255 - MCU_CPU_UNDEFINED_MODE	CPU mode is undefined
Description	Type to specify the current CPU power mode.	
Source	IFX	
Autosar Version	Applicable for Autosar versions 4.2.2 and 4.4.0.	

1.3.2.27 Mcu_TrapRequestType
Table 350 Specification for Mcu_TrapRequestType

Syntax	Mcu_TrapRequestType	
Type	Enumeration	
File	Mcu.h	
Range	0 - MCU_TRAP_ESR0	ESR0 trap request
	1 - MCU_TRAP_ESR1	ESR1 trap request
	2 - MCU_TRAP_TRAP2	TRAP bit 2 trap request
	3 - MCU_TRAP_SMU	SMU trap request
	4 - MCU_TRAP_INVALID	Invalid trap source request
Description	Type to specify the TRAP type.	
Source	IFX	
Autosar Version	Applicable for Autosar versions 4.2.2 and 4.4.0.	

1.3.2.28 Mcu_ConfigType
Table 351 Specification for Mcu_ConfigType

Syntax	Mcu_ConfigType	
Type	Structure	
File	Mcu.h	
Range	-	The elements of the data structure are specific to the microcontroller.
Description	A pointer to such a structure is provided to the MCU initialization routines for configuration.	
Source	AUTOSAR	
Autosar Version	Applicable for Autosar versions 4.2.2 and 4.4.0.	

1 Mcu driver
1.3.2.29 Mcu_PllStatusType
Table 352 Specification for Mcu_PllStatusType

Syntax	Mcu_PllStatusType	
Type	Enumeration	
File	Mcu.h	
Range	0 - MCU_PLL_LOCKED	The status of both the PLLs is locked.
	1 - MCU_PLL_UNLOCKED	The status of system and/or peripheral PLL is unlocked.
	2 - MCU_PLL_STATUS_UNDEFINED	The status of PLLs is not known.
Description	This is a status value returned by the Mcu_GetPllStatus function of the MCU module. This type provides the status of PLL lock.	
Source	AUTOSAR	
Autosar Version	Applicable for Autosar versions 4.2.2 and 4.4.0.	

1.3.2.30 Mcu_ClockType
Table 353 Specification for Mcu_ClockType

Syntax	Mcu_ClockType	
Type	uint32	
File	Mcu.h	
Range	0 - 255	The range is dependent on the number of different clock settings provided in the configuration structure.
Description	Identification for the clock setting, which is configured in the configuration structure.	
Source	AUTOSAR	
Autosar Version	Applicable for Autosar versions 4.2.2 and 4.4.0.	

1.3.2.31 Mcu_ResetType
Table 354 Specification for Mcu_ResetType

Syntax	Mcu_ResetType	
Type	Enumeration	
File	Mcu.h	
Range	0 - MCU_ESR0_RESET	The previous reset type is ESR0 reset
	1 - MCU_ESR1_RESET	The previous reset type is ESR1 reset
	2 - MCU_SMU_RESET	The previous reset type is SMU reset
	3 - MCU_SW_RESET	The previous reset type is software reset
	4 - MCU_STM0_RESET	The previous reset type is STM 0 reset

(table continues...)

1 Mcu driver
Table 354 (continued) Specification for Mcu_ResetType

	5 - MCU_STM1_RESET	The previous reset type is STM 1 reset
	6 - MCU_STM2_RESET	The previous reset type is STM 2 reset
	7 - MCU_STM3_RESET	The previous reset type is STM 3 reset
	8 - MCU_STM4_RESET	The previous reset type is STM 4 reset
	9 - MCU_STM5_RESET	The previous reset type is STM 5 reset
	10 - MCU_POWER_ON_RESET	The previous reset type is power on reset
	11 - MCU_CB0_RESET	The previous reset type is CB0 reset
	12 - MCU_CB1_RESET	The previous reset type is CB1 reset
	13 - MCU_CB3_RESET	The previous reset type is CB3 reset
	14 - MCU_EVRC_RESET	The previous reset type is EVRC reset
	15 - MCU_EVR33_RESET	The previous reset type is EVR 3.3V reset
	16 - MCU_SUPPLY_WDOG_RESET	The previous reset type is Supply Watchdog reset
	17 - MCU_STBYR_RESET	The previous reset type is Standby Mode reset
	18 - MCU_LBIST_RESET	The previous reset type is reset from LBIST completion
	254 - MCU_RESET_MULTIPLE	There were multiple resets reasons, on which power on reset is one
	255 - MCU_RESET_UNDEFINED	The previous reset type is undefined
Description	This type provides the reset reason types.	
Source	AUTOSAR	
Autosar Version	Applicable for Autosar versions 4.2.2 and 4.4.0.	

1.3.2.32 Mcu_RawResetType
Table 355 Specification for Mcu_RawResetType

Syntax	Mcu_RawResetType	
Type	uint32	
File	Mcu.h	
Range	0 - 0xFFFFFFFF	
Description	This type specifies the reset reason in raw register format read from a reset status register. For the range, bitfields [31], [17], [15-11], [2] are always zero.	
Source	AUTOSAR	
Autosar Version	Applicable for Autosar versions 4.2.2 and 4.4.0.	

1 Mcu driver
1.3.2.33 Mcu_RamSectionType
Table 356 Specification for Mcu_RamSectionType

Syntax	Mcu_RamSectionType	
Type	uint32	
File	Mcu.h	
Range	0 - (Number of Ram sections - 1)	The range is dependent on the number of RAM sections provided in the configuration structure.
Description	Identification for RAM section, which is configured in the configuration structure.	
Source	AUTOSAR	
Autosar Version	Applicable for Autosar versions 4.2.2 and 4.4.0.	

1.3.2.34 Mcu_ModeType
Table 357 Specification for Mcu_ModeType

Syntax	Mcu_ModeType	
Type	uint8	
File	Mcu.h	
Range	0 - 2	TC3xx supports 3 power modes: Idle, Sleep and Standby modes
Description	Identification for MCU mode, which is configured in the configuration structure.	
Source	AUTOSAR	
Autosar Version	Applicable for Autosar versions 4.2.2 and 4.4.0.	

1.3.2.35 Mcu_17_Gtm_TimChConfigType
Table 358 Specification for Mcu_17_Gtm_TimChConfigType

Syntax	Mcu_17_Gtm_TimChConfigType	
Type	Structure	
File	Mcu_17_TimerIp.h	
Range	Mcu_17_Gtm_TimerChIdentifierType TimerId	Tim channel user identifier.
	uint32 TimChCtrlReg	Tim channel control registers value.
	uint32 TimChExtendedCtrlReg	Tim channel extended control register value
	uint32 TimChFltRisingEdge	Tim channel filter rising edge parameter.
	uint32 TimChFltFallingEdge	Tim channel filter falling edge parameter.

(table continues...)

1 Mcu driver
Table 358 (continued) Specification for Mcu_17_Gtm_TimChConfigType

	uint32 TimChIntEnMode	Tim channel interrupt enable and interrupt mode values are encoded in this structure member Bit 0 specifies new value interrupt enable Bit 1 specifies ECNT overflow interrupt enable Bit 2 specifies CNT overflow interrupt enable Bit 3 specifies GPR overflow interrupt enable Bit 4 specifies timeout detection interrupt enable Bit 5 specifies glitch detection interrupt enable Bits [6,7] specifies interrupt mode configured for the channel and are encoded as: 00-Level Mode, 01-Pulse Mode, 10- Pulse Notify Mode, 11- Single Pulse Mode
Description	This structure holds the TIM channel specific parameters details required for the TIM channel initialization.	
Source	IFX	
Autosar Version	Applicable for Autosar versions 4.2.2 and 4.4.0.	

1.3.2.36 Mcu_17_Gtm_TimerChIdentifierType
Table 359 Specification for Mcu_17_Gtm_TimerChIdentifierType

Syntax	Mcu_17_Gtm_TimerChIdentifierType	
Type	uint32	
File	Mcu_17_TimerIp.h	
Range	0 - 0xFFFFFFFF	Range of uint32
Description	Contains the information on the user of the channel. Bit[15:8] - Module number Bit[7:0] - Channel number	
Source	IFX	
Autosar Version	Applicable for Autosar versions 4.2.2 and 4.4.0.	

1.3.2.37 Mcu_17_Gtm_TimerOutType
Table 360 Specification for Mcu_17_Gtm_TimerOutType

Syntax	Mcu_17_Gtm_TimerOutType	
Type	uint32	
File	Mcu_17_TimerIp.h	
Range	MCU_GTM_TIMER_TOM	Tom channel

(table continues...)

1 Mcu driver
Table 360 (continued) Specification for Mcu_17_Gtm_TimerOutType

	MCU_GTM_TIMER_ATOM	Atom channel
Description	This type identifies if the GTM output timer is either TOM or ATOM type.	
Source	IFX	
Autosar Version	Applicable for Autosar versions 4.2.2 and 4.4.0.	

1.3.2.38 Mcu_17_Gtm_TomAtomChConfigType
Table 361 Specification for Mcu_17_Gtm_TomAtomChConfigType

Syntax	Mcu_17_Gtm_TomAtomChConfigType	
Type	Structure	
File	Mcu_17_TimerIp.h	
Range	Mcu_17_Gtm_TimerOutType TimerType	TOM or ATOM channel ID
	Mcu_17_Gtm_TimerChIdentifierType TimerId	TOM/ATOM channel user identifier
	uint32 TimerChCtrlReg	TOM/ATOM channel control registers value
	uint32 TimerChCN0Reg	TOM/ATOM channel CN0 register value
	uint32 TimerChCM0Reg	TOM/ATOM channel CM0 register value
	uint32 TimerChCM1Reg	TOM/ATOM channel CM1 register value
	uint32 TimerChSR0Reg	TOM/ATOM channel SR0 register value
	uint32 TimerChSR1Reg	TOM/ATOM channel SR1 register value
Description	uint32 TimerChIntEnMode	TOM/ATOM channel interrupt enable and interrupt mode values are encoded in this structure member Bit 0 specifies CCU0 interrupt enable Bit 1 specifies CCU1 interrupt enable Bits [7, 6] specifies interrupt mode configured for the channel and are encoded as: 00- Level Mode, 01- Pulse Mode, 10- Pulse Notify Mode, 11- Single Pulse Mode
	This structure holds the TOM/ATOM channel-specific initialization parameters.	
	IFX	
	Applicable for Autosar versions 4.2.2 and 4.4.0.	

1.3.2.39 Mcu_17_Gtm_TimerStatusType
Table 362 Specification for Mcu_17_Gtm_TimerStatusType

Syntax	Mcu_17_Gtm_TimerStatusType
Type	uint8

(table continues...)

1 Mcu driver
Table 362 (continued) Specification for Mcu_17_Gtm_TimerStatusType

File	Mcu_17_TimerIp.h	
Range	MCU_GTM_TIMER_STOPPED	GTM timer channel is stopped
	MCU_GTM_TIMER_RUNNING	GTM timer channel is enabled/running
Description	This type informs the running state of the GTM timer channel.	
Source	IFX	
Autosar Version	Applicable for Autosar versions 4.2.2 and 4.4.0.	

1.3.2.40 Mcu_17_Ccu6_ComparatorType
Table 363 Specification for Mcu_17_Ccu6_ComparatorType

Syntax	Mcu_17_Ccu6_ComparatorType	
Type	uint8	
File	Mcu_17_TimerIp.h	
Range	MCU_CCU6_COMPARATOR_CCU60	CCU60 Comparator
	MCU_CCU6_COMPARATOR_CCU61	CCU61 Comparator
	MCU_CCU6_COMPARATOR_CCU62	CCU62 Comparator
	MCU_CCU6_COMPARATOR_CCU63	CCU63 Comparator
Description	This type identifies the CCU6 comparator used for a kernel.	
Source	IFX	
Autosar Version	Applicable for Autosar versions 4.2.2 and 4.4.0.	

1.3.2.41 Mcu_17_Ccu6_KernelIdentifierType
Table 364 Specification for Mcu_17_Ccu6_KernelIdentifierType

Syntax	Mcu_17_Ccu6_KernelIdentifierType	
Type	uint8	
File	Mcu_17_TimerIp.h	
Range	CCU6_KERNEL_0	CCU6 Kernel 0
	CCU6_KERNEL_1	CCU6 Kernel 1
Description	This type identifies the CCU6 kernel used.	
Source	IFX	
Autosar Version	Applicable for Autosar versions 4.2.2 and 4.4.0.	

1 Mcu driver
1.3.2.42 Mcu_17_Ccu6_TimerChIdentifierType
Table 365 Specification for Mcu_17_Ccu6_TimerChIdentifierType

Syntax	Mcu_17_Ccu6_TimerChIdentifierType	
Type	uint32	
File	Mcu_17_TimerIp.h	
Range	0 - 0xFFFFFFF	
Description	This type provides the user information of the CCU6 timer channel. Bits[7:0] - Kernel used Bits[15:8] - T12/T13 used Bits[23:16] - Comparator used	
Source	IFX	
Autosar Version	Applicable for Autosar versions 4.2.2 and 4.4.0.	

1.3.2.43 Mcu_17_Ccu6_TimerConfigType
Table 366 Specification for Mcu_17_Ccu6_TimerConfigType

Syntax	Mcu_17_Ccu6_TimerConfigType	
Type	Structure	
File	Mcu_17_TimerIp.h	
Range	Mcu_17_Ccu6_TimerChIdentifierType TimerId	CCU6 timer channel user identifier
	uint32 TimerCtrlReg0	CCU6 Timer channel control register 0 contents For T12 - [2-0] - Timer T12 Input Clock Select [3] - Timer T12 Prescaler Bit [7] - T12 Operating Mode For T13 - [10-8] - Timer T13 Input Clock Select [11] - Timer T13 Prescaler Bit
	uint32 ModCtrlReg	For T12 - [1-0] - Timer T12 modulation enable for comparator For T13 - [2] - Enable Compare Timer T13 Output
	uint32 PasStateLvlReg	For T12 - [1-0] - Compare Outputs Passive State Level of comparator For T13 - [2] - Passive State Level of Output COUT63
	uint32 TimerCntReg	CCU6 timer channel counter channel contents
	uint32 TimerPeriodReg	CCU6 timer channel period register contents
	uint32 Ccu6ShadowReg	CCU6 timer channel shadow register contents

1.3.3 Functions - APIs

This section lists all the APIs of the MCU driver.

1.3.3.1 Mcu_17_Gtm_ConnectTimerOutToPortPin
Table 370 Specification for Mcu_17_Gtm_ConnectTimerOutToPortPin API

Syntax	<pre>void Mcu_17_Gtm_ConnectTimerOutToPortPin (const uint16 Tout_IndexNumber, const Mcu_17_Gtm_MappedPortTimerOutType TimerOutColumnSelect)</pre>
Service ID	0xA0
Sync/Async	Synchronous
Safety Level	Refer to the release notes for the safety related info

(table continues...)

1 Mcu driver
Table 370 (continued) Specification for Mcu_17_Gtm_ConnectTimerOutToPortPin API

Re-entrancy	Non Reentrant	
Parameters (in)	Tout_IndexNumber TimerOutColumnSelect	Timer output index number Represents mapped column for the table GTM output to Port Connection in the hardware manual
Parameters (out)	-	-
Parameters (in - out)	-	-
Return	void	-
Description	Mcu_17_Gtm_ConnectTimerOutToPortPin is used to connect an output GTM channel(TOM/ATOM) to a port pin. The selected port pin is based on Tout_IndexNumber value and channel is based on TimerOutColumnSelect parameter.	
Source	IFX	
Error handling	-	
Configuration dependencies	-	
User hints	User shall be aware of configuring TOUTSELx register at runtime and ensure it does not conflict with configured TOUTSELx done by Mcu_Init as this may lead to a glitch on TOM/ATOM channels.	
SFR accessed	GTM_TOUTSEL(rw) <i>Note : The list includes all the SFRs accessed in the context of the API. It lists the SFRs accessed by the driver and called interfaces from other drivers. During runtime, the SFRs accessed from this list may vary based on configuration and execution context.</i>	
Autosar Version	Applicable for Autosar versions 4.2.2 and 4.4.0.	

1.3.3.2 Mcu_GetRamState
Table 371 Specification for Mcu_GetRamState API

Syntax	Mcu_RamStateType Mcu_GetRamState (void)	
Service ID	0x0A	
Sync/Async	Synchronous	
Safety Level	Refer to the release notes for the safety related info	
Re-entrancy	Reentrant	
Parameters (in)	-	-

(table continues...)

1 Mcu driver
Table 371 (continued) Specification for Mcu_GetRamState API

Parameters (out)	-	-
Parameters (in - out)	-	-
Return	Mcu_RamStateType	Enumeration depicting state of RAM after a power down cycle
Description	Mcu_GetRamState returns the RAM state. MCU_RAMSTATE_INVALID: RAM contents got corrupted MCU_RAMSTATE_VALID: RAM contents are valid	
Source	AUTOSAR	
Error handling	MCU_E_UNINIT	
Configuration dependencies	-	
User hints	None	
SFR accessed	CPU_CORE_ID(r), SCU_RSTCON2(r) <i>Note : The list includes all the SFRs accessed in the context of the API. It lists the SFRs accessed by the driver and called interfaces from other drivers. During runtime, the SFRs accessed from this list may vary based on configuration and execution context.</i>	
Autosar Version	Applicable for Autosar versions 4.2.2 and 4.4.0.	

1.3.3.3 Mcu_Init
Table 372 Specification for Mcu_Init API

Syntax	<pre>void Mcu_Init (const Mcu_ConfigType * const ConfigPtr)</pre>	
Service ID	0x00	
Sync/Async	Synchronous	
Safety Level	Refer to the release notes for the safety related info	
Re-entrancy	Non Reentrant	
Parameters (in)	ConfigPtr	Pointer to the MCU driver configuration set
Parameters (out)	-	-
Parameters (in - out)	-	-
Return	void	-

(table continues...)

1 Mcu driver
Table 372 (continued) Specification for Mcu_Init API

Description	<p>Mcu_Init initializes the MCU driver. Mcu_Init initializes the power modes, reset, trap and timer global configurations registers.</p> <p>If the interface Mcu_ClearColdResetStatus is unavailable, then Mcu_Init clears the reset status bit-fields. It also initializes the module clock for GTM, CCU6, GPT12 and Converter control block. Apart from module clock it also initializes cluster clocks, GTM triggers to ADC and DSADC and block pre-scalers for GPT12.</p>
Source	AUTOSAR
Error handling	MCU_E_PARAM_CONFIG, MCU_E_INIT_FAILED, MCU_E_GTM_CLC_ENABLE_ERR, MCU_E_CCU6_CLC_ENABLE_ERR, MCU_E_GPT12_CLC_ENABLE_ERR, MCU_E_CORE_MISMATCH, MCU_E_CONVCTRL_CLC_ENABLE_ERR

Autosar Version	Applicable for Autosar versions 4.2.2 and 4.4.0.

1 Mcu driver
1.3.3.4 Mcu_InitRamSection
Table 373 Specification for Mcu_InitRamSection API

Syntax	<pre>Std_ReturnType Mcu_InitRamSection (const Mcu_RamSectionType RamSection)</pre>	
Service ID	0x01	
Sync/Async	Synchronous	
Safety Level	Refer to the release notes for the safety related info	
Re-entrancy	Reentrant for other RAM sections	
Parameters (in)	RamSection	Selects RAM memory section provided in the configuration set
Parameters (out)	-	-
Parameters (in - out)	-	-
Return	Std_ReturnType	E_OK – RAM successfully initialized E_NOT_OK – RAM initialization failed
Description	Mcu_InitRamSection initializes the specified RAM section.	
Source	AUTOSAR	
Error handling	MCU_E_PARAM_RAMSECTION , MCU_E_UNINIT	
Configuration dependencies	-	
User hints	Protection of the RAM initialization through MPU protection for the RAM address passed in configuration shall be responsibility of the user.	
SFR accessed	-	
Autosar Version	Applicable for Autosar versions 4.2.2 and 4.4.0.	

1.3.3.5 Mcu_InitClock
Table 374 Specification for Mcu_InitClock API

Syntax	<pre>Std_ReturnType Mcu_InitClock (const Mcu_ClockType ClockSetting)</pre>	
Service ID	0x02	
Sync/Async	Synchronous	
Safety Level	Refer to the release notes for the safety related info	
Re-entrancy	Non re-entrant	

(table continues...)

1 Mcu driver
Table 374 (continued) Specification for Mcu_InitClock API

Parameters (in)	ClockSetting	Clock setting ID
Parameters (out)	-	-
Parameters (in - out)	-	-
Return	Std_ReturnType	E_OK: Clock successfully initialized E_NOT_OK: Clock not initialized
Description	Mcu_InitClock initializes the system PLL, peripheral PLL and other MCU specific clock options (peripheral clock selection and dividers).	
Source	AUTOSAR	
Error handling	MCU_E_PARAM_CLOCK, MCU_E_UNINIT, MCU_E_OSC_FAILURE, MCU_E_PERIPHERAL_PLL_TIMEOUT_ERR, MCU_E_SYSTEM_PLL_TIMEOUT_ERR, MCU_E_CCUCON_UPDATE_ERR, MCU_E_CORE_MISMATCH, MCU_E_PHSCFG_UPDATE_ERR	
Configuration dependencies	McuInitClock	
User hints	For low power divider configuration scenario, user shall verify the validity of configured clock values as per inter-relationship between different clocks and configuration generation script will not perform data integrity checks for this configuration scenario.	
SFR accessed	CONVERTER_CCCTRL(rw), CONVERTER_PHSCFG(rw), CPU_COMPAT(w), CPU_CORE_ID(r), CPU_SYSCON(w), CPU_TPS_EXTIM_CLASS_EN(w), CPU_TPS_EXTIM_ENTRY_LVAL(w), CPU_TPS_EXTIM_EXIT_LVAL(w), SCU_CCUCON0(rw), SCU_CCUCON1(rw), SCU_CCUCON10(w), SCU_CCUCON11(w), SCU_CCUCON2(rw), SCU_CCUCON3(rw), SCU_CCUCON4(rw), SCU_CCUCON5(rw), SCU_CCUCON6(w), SCU_CCUCON7(w), SCU_CCUCON8(w), SCU_CCUCON9(w), SCU_EICON0(rw), SCU_EXTCON(w), SCU_OSCCON(rw), SCU_PERPLLCON0(rw), SCU_PERPLLCON1(rw), SCU_PERPLLSTAT(r), SCU_SEICON0(rw), SCU_SYSPLLCON0(rw), SCU_SYSPLLCON1(rw), SCU_SYSPLLCON2(w), SCU_SYSPLLSTAT(r), STM_TIM0(r) <i>Note : The list includes all the SFRs accessed in the context of the API. 1 Mcu driver
Table 375 (continued) Specification for Mcu_VextStdbyCtrl API

Sync/Async	Synchronous	
Safety Level	Refer to the release notes for the safety related info	
Re-entrancy	Non Reentrant	
Parameters (in)	SetValue	0x0 - To disable Standby entry on Vext supply Ramp down, 0x1 - To enable Standby entry on Vext supply ramp down
Parameters (out)	-	-
Parameters (in - out)	-	-
Return	void	-
Description	Mcu_VextStdbyCtrl is used to enable or disable the ability to enter standby mode on Vext supply ramp down.	
Source	IFX	
Error handling	MCU_E_UNINIT, MCU_E_PARAM_STDBY	
Configuration dependencies	McuVextStdbyCtrl	
User hints	-	
SFR accessed	CPU_COMPAT(w), CPU_SYSCON(w), CPU_TPS_EXTIM_CLASS_EN(w), CPU_TPS_EXTIM_ENTRY_LVAL(w), CPU_TPS_EXTIM_EXIT_LVAL(w), PMS_PMSWCR0(rw), SCU_CCUCON0(r), SCU_OSCCON(r), SCU_SEICON0(rw), SCU_SYSPLLCON0(r), SCU_SYSPLLCON1(r), STM_TIM0(r) <i>Note : The list includes all the SFRs accessed in the context of the API. It lists the SFRs accessed by the driver and called interfaces from other drivers. During runtime, the SFRs accessed from this list may vary based on configuration and execution context.</i>	
Autosar Version	Applicable for Autosar versions 4.2.2 and 4.4.0.	

1.3.3.7 Mcu_DistributePllClock
Table 376 Specification for Mcu_DistributePllClock API

Syntax	Std_ReturnType Mcu_DistributePllClock (void)	
Service ID	0x03	
Sync/Async	Synchronous	
Safety Level	Refer to the release notes for the safety related info	
Re-entrancy	Non Reentrant	
Parameters (in)	-	-

(table continues...)

1 Mcu driver
Table 376 (continued) Specification for Mcu_DistributePllClock API

Parameters (out)	-	-
Parameters (in - out)	-	-
Return	Std_ReturnType	E_OK: Clock distribution successful. E_NOT_OK: Clock distribution unsuccessful.
Description	Mcu_DistributePllClock switches the clock source to PLL output.	
Source	AUTOSAR	
Error handling	MCU_E_UNINIT, MCU_E_PLL_NOT_LOCKED, MCU_E_SYSTEM_PLL_TIMEOUT_ERR, MCU_E_CCUCON_UPDATE_ERR, MCU_E_CORE_MISMATCH	
Configuration dependencies	McuNoPll	
User hints	Upper layer calls Distribute PLL Clock API, in case MCU module needs a separate request to activate the system PLL and peripheral PLL clock after the system PLL and peripheral PLL is locked. Status of the system and peripheral PLL lock as locked, is checked by the upper layer before calling this API.	
SFR accessed	CPU_COMPAT(w), CPU_CORE_ID(r), CPU_SYSCON(w), CPU_TPS_EXTIM_CLASS_EN(w), CPU_TPS_EXTIM_ENTRY_LVAL(w), CPU_TPS_EXTIM_EXIT_LVAL(w), SCU_CCUCON0(rw), SCU_OSCCON(r), SCU_PERPLLCON1(rw), SCU_PERPLLSTAT(r), SCU_SEICON0(rw), SCU_SYSPLLCON0(r), SCU_SYSPLLCON1(rw), SCU_SYSPLLSTAT(r), STM_TIM0(r) <i>Note : The list includes all the SFRs accessed in the context of the API. It lists the SFRs accessed by the driver and called interfaces from other drivers. During runtime, the SFRs accessed from this list may vary based on configuration and execution context.</i>	
Autosar Version	Applicable for Autosar versions 4.2.2 and 4.4.0.	

1.3.3.8 Mcu_GetPllStatus
Table 377 Specification for Mcu_GetPllStatus API

Syntax	Mcu_PllStatusType Mcu_GetPllStatus (void)	
Service ID	0x04	
Sync/Async	Synchronous	
Safety Level	Refer to the release notes for the safety related info	
Re-entrancy	Reentrant	
Parameters (in)	-	-

(table continues...)

1 Mcu driver
Table 377 (continued) Specification for Mcu_GetPllStatus API

Parameters (out)	-	-
Parameters (in - out)	-	-
Return	Mcu_PllStatusType	A 32-bit enumerator denoting status of PLL
Description	Mcu_GetPllStatus provides the lock status of system and peripheral PLL.	
Source	AUTOSAR	
Error handling	MCU_E_UNINIT	
Configuration dependencies	-	
User hints	-	
SFR accessed	SCU_PERPLLSTAT(r), SCU_SYSPLLSTAT(r) <i>Note : The list includes all the SFRs accessed in the context of the API. It lists the SFRs accessed by the driver and called interfaces from other drivers. During runtime, the SFRs accessed from this list may vary based on configuration and execution context.</i>	
Autosar Version	Applicable for Autosar versions 4.2.2 and 4.4.0.	

1.3.3.9 Mcu_GetResetReason
Table 378 Specification for Mcu_GetResetReason API

Syntax	Mcu_ResetType Mcu_GetResetReason (void)	
Service ID	0x05	
Sync/Async	Synchronous	
Safety Level	Refer to the release notes for the safety related info	
Re-entrancy	Reentrant	
Parameters (in)	-	-
Parameters (out)	-	-
Parameters (in - out)	-	-
Return	Mcu_ResetType	A 32-bit enumerator denoting the cause of reset
Description	Mcu_GetResetReason reads the reset type from the hardware.	
Source	AUTOSAR	
Error handling	MCU_E_UNINIT	

(table continues...)

1 Mcu driver
Table 378 (continued) Specification for Mcu_GetResetReason API

User hints	-
SFR accessed	-
Autosar Version	Applicable for Autosar versions 4.2.2 and 4.4.0.

1.3.3.10 Mcu_GetResetRawValue
Table 379 Specification for Mcu_GetResetRawValue API

Syntax	Mcu_RawResetType Mcu_GetResetRawValue (void)	
Service ID	0x06	
Sync/Async	Synchronous	
Safety Level	Refer to the release notes for the safety related info	
Re-entrancy	Reentrant	
Parameters (in)	-	-
Parameters (out)	-	-
Parameters (in - out)	-	-
Return	Mcu_RawResetType	32-bit unsigned integer denoting raw reset value
Description	Mcu_GetResetRawValue reads the reset type from the hardware register.	
Source	AUTOSAR	
Error handling	MCU_E_UNINIT	
Configuration dependencies	-	
User hints	-	
SFR accessed	-	
Autosar Version	Applicable for Autosar versions 4.2.2 and 4.4.0.	

1 Mcu driver
1.3.3.11 Mcu_PerformReset
Table 380 Specification for Mcu_PerformReset API

Syntax	<pre>void Mcu_PerformReset (void)</pre>	
Service ID	0x07	
Sync/Async	Synchronous	
Safety Level	Refer to the release notes for the safety related info	
Re-entrancy	Non Reentrant	
Parameters (in)	-	-
Parameters (out)	-	-
Parameters (in - out)	-	-
Return	void	-
Description	Mcu_PerformReset performs a microcontroller reset(software reset).	
Source	AUTOSAR	
Error handling	MCU_E_UNINIT, MCU_E_SW_RESET_FAILED	
Configuration dependencies	McuPerformResetApi	
User hints	-	
SFR accessed	SCU_CCUCON0(r), SCU_EICON0(rw), SCU_OSCCON(r), SCU_SWRSTCON(rw), SCU_SYSPLLCON0(r), SCU_SYSPLLCON1(r), STM_TIM0(r) <i>Note : The list includes all the SFRs accessed in the context of the API. It lists the SFRs accessed by the driver and called interfaces from other drivers. During runtime, the SFRs accessed from this list may vary based on configuration and execution context.</i>	
Autosar Version	Applicable for Autosar versions 4.2.2 and 4.4.0.	

1.3.3.12 Mcu_SetMode
Table 381 Specification for Mcu_SetMode API

Syntax	<pre>void Mcu_SetMode (const Mcu_ModeType McuMode)</pre>	
Service ID	0x08	
Sync/Async	Synchronous	

(table continues...)

1 Mcu driver
Table 381 (continued) Specification for Mcu_SetMode API

Safety Level	Refer to the release notes for the safety related info	
Re-entrancy	Concurrency Safe for IDLE mode transition requests and non re-entrant for other transitions	
Parameters (in)	McuMode	Set different MCU power modes configured in the configuration set
Parameters (out)	-	-
Parameters (in - out)	-	-
Return	void	-
Description	<p>Mcu_SetMode activates the MCU power modes. The 3 power modes supported are Idle, Sleep and StandBy.</p> <p>The API is re-entrant and concurrency safe for Idle mode, but for Sleep and Stand By mode, it is not concurrency safe and non - reentrant.</p>	
Source	AUTOSAR	
Error handling	MCU_E_PARAM_MODE , MCU_E_UNINIT, MCU_E_UNAUTHORIZED_REQUESTER, MCU_E_PERIPHERAL_PLL_TIMEOUT_ERR, MCU_E_SYSTEM_PLL_TIMEOUT_ERR, MCU_E_PMSWCR_UPDATE_ERR	
Configuration dependencies	-	
User hints	<p>The API Mcu_SetMode assumes that all interrupts are disabled prior to the call of API by the calling instance.</p> <p>For SLEEP or STANDBY modes, user shall start a timer with notification before calling Mcu_SetMode(), such that the timer expires and provides notification, if system has not entered SLEEP or STANDBY mode.</p>	
SFR accessed	<p>CPU_BIV(w), CPU_BTV(w), CPU_COMPAT(w), CPU_CORE_ID(r), CPU_DCON0(w), CPU_ISP(w), CPU_PCON0(w), CPU_PMA0(w), CPU_PMA1(w), CPU_SEGEN(w), CPU_SYSCON(w), CPU_TPS_EXTIM_CLASS_EN(w), CPU_TPS_EXTIM_ENTRY_LVAL(w), CPU_TPS_EXTIM_EXIT_LVAL(w), PMS_PMSWCR3(rw), SCU_CCUCON0(rw), SCU_OSCCON(r), SCU_PERPLLCON0(rw), SCU_PERPLLCON1(rw), SCU_PERPLLSTAT(r), SCU_PMCSR0(rw), SCU_PMCSR1(rw), SCU_PMCSR2(rw), SCU_PMCSR3(rw), SCU_PMCSR4(rw), SCU_PMCSR5(rw), SCU_PMSWCR1(rw), SCU_SEICON0(rw), SCU_SYSPLLCON0(rw), SCU_SYSPLLCON1(rw), SCU_SYSPLLSTAT(r), SCU_WDTCPU_CON0(rw), SCU_WDTCPU_SR(r), STM_TIM0(r)</p> <p><i>Note : The list includes all the SFRs accessed in the context of the API. It lists the SFRs accessed by the driver and called interfaces from other drivers. During runtime, the SFRs accessed from this list may vary based on configuration and execution context.</i></p>	
Autosar Version	Applicable for Autosar versions 4.2.2 and 4.4.0.	

1 Mcu driver
1.3.3.13 Mcu_GetVersionInfo
Table 382 Specification for Mcu_GetVersionInfo API

Syntax	<pre>void Mcu_GetVersionInfo (const Std_VersionInfoType * const versioninfo)</pre>	
Service ID	0x09	
Sync/Async	Synchronous	
Safety Level	Refer to the release notes for the safety related info	
Re-entrancy	Reentrant	
Parameters (in)	versioninfo	Pointer to where to store the version information of this module.
Parameters (out)	-	-
Parameters (in - out)	-	-
Return	void	-
Description	Mcu_GetVersionInfo returns the version information of this module.	
Source	AUTOSAR	
Error handling	MCU_E_PARAM_POINTER	
Configuration dependencies	McuVersionInfoApi	
User hints	-	
SFR accessed	-	
Autosar Version	Applicable for Autosar versions 4.2.2 and 4.4.0.	

1.3.3.14 Mcu_ClearColdResetStatus

Parameters (in)	WakeupCause	Wakeup causes to be cleared by this API
Parameters (out)	-	-
Parameters (in - out)	-	-
Return	void	-

(table continues...)

1 Mcu driver
Table 388 (continued) Specification for Mcu_ClearWakeupCause API

Description	Mcu_ClearWakeupCause clears the reason for wakeup from the standby mode. The input parameter passed is masked accordingly and written in the register to clear the standby wake up cause.
Source	IFX
Error handling	MCU_E_UNINIT
Configuration dependencies	MculfxLpmApi
User hints	User should ensure that the wake-up cause(s) which triggered wakeup during STANDBY, shall be cleared explicitly before next STANDBY entry.
SFR accessed	CPU_COMPAT(w), CPU_SYSCON(w), CPU_TPS_EXTIM_CLASS_EN(w), CPU_TPS_EXTIM_ENTRY_LVAL(w), CPU_TPS_EXTIM_EXIT_LVAL(w), PMS_PMSWSTATCLR(w), SCU_CCUCON0(r), SCU_OSCCON(r), SCU_SEICON0(rw), SCU_SYSPLLCON0(r), SCU_SYSPLLCON1(r), STM_TIM0(r) <i>Note : The list includes all the SFRs accessed in the context of the API. It lists the SFRs accessed by the driver and called interfaces from other drivers. During runtime, the SFRs accessed from this list may vary based on configuration and execution context.</i>
Autosar Version	Applicable for Autosar versions 4.2.2 and 4.4.0.

1.3.3.20 Mcu_GetTrapCause
Table 389 Specification for Mcu_GetTrapCause API

Syntax	uint32 Mcu_GetTrapCause (void)	
Service ID	0x56	
Sync/Async	Synchronous	
Safety Level	Refer to the release notes for the safety related info	
Re-entrancy	Reentrant	
Parameters (in)	-	-
Parameters (out)	-	-
Parameters (in - out)	-	-
Return	uint32	Returns the reason for the occurrence of the trap
Description	A bit-mask indicating events responsible for the current trap/last trap serviced is returned back to the caller. In case the API is called prior to MCU initialization, it returns a value of 0xFFFFFFFF.	
Source	IFX

1 Mcu driver
Table 440 (continued) Specification for Mcu_17_Stm_CheckComparator API

Configuration dependencies	-
User hints	User should verify the value of the Compare register as its value can change at the run-time
SFR accessed	STM_CMCON(r), STM_ICR(r) <i>Note : The list includes all the SFRs accessed in the context of the API. It lists the SFRs accessed by the driver and called interfaces from other drivers. During runtime, the SFRs accessed from this list may vary based on configuration and execution context.</i>
Autosar Version	Applicable for Autosar versions 4.2.2 and 4.4.0.

1.3.3.72 Mcu_17_Stm_ComparatorIntDisable
Table 441 Specification for Mcu_17_Stm_ComparatorIntDisable API

Syntax	<pre>void Mcu_17_Stm_ComparatorIntDisable (const uint8 StmTimerId, const uint8 StmComparatorId)</pre>	
Service ID	0x88	
Sync/Async	Synchronous	
Safety Level	Refer to the release notes for the safety related info	
Re-entrancy	Reentrant for other STM Timers	
Parameters (in)	StmTimerId StmComparatorId	STM Timer Id STM Comparator Id
Parameters (out)	-	-
Parameters (in - out)	-	-
Return	void	-
Description	Mcu_17_Stm_ComparatorIntDisable disables the comparator interrupt.	
Source	IFX	
Error handling	-	
Configuration dependencies	-	
User hints	-	
SFR accessed	STM_ICR(w) <i>Note : The list includes all the SFRs accessed in the context of the API. It lists the SFRs accessed by the driver and called interfaces from other drivers. During runtime, the SFRs accessed from this list may vary based on configuration and execution context.</i>

1.3.4 Notifications and Callbacks

This section lists all the notification and callbacks of MCU driver.

1.3.4.1 Mcu_ClockFailureNotification
Table 442 Specification for Mcu_ClockFailureNotification API

Syntax	<pre>void Mcu_ClockFailureNotification (void)</pre>	
Service ID	0xFF	
Sync/Async	Synchronous	
Safety Level	Refer to the release notes for the safety related info	
Re-entrancy	Non Reentrant	
Parameters (in)	-	-
Parameters (out)	-	-
Parameters (in - out)	-	-
Return	void	-
Description	<p>Mcu_ClockFailureNotification can be invoked to know the source of the clock failure, after such an occurrence. Mcu_ClockFailureNotification reports any one of MCU_E_SYSTEM_PLL_LOCK_LOSS, MCU_E_PERIPHERAL_LOCK_LOSS and MCU_E_OSC_FAILURE Production errors.</p> <p>If the root cause of a PLL loss of lock is an oscillator failure, then MCU_E_OSC_FAILURE Production error is reported.</p> <p>Availability of this function is controlled by the McuClockSourceFailureNotification parameter.</p>	
Source	IFX	
Error handling	MCU_E_SYSTEM_PLL_LOCK_LOSS, MCU_E_PERIPHERAL_PLL_LOCK_LOSS, MCU_E_OSC_FAILURE	
Configuration dependencies	McuClockSourceFailureNotification	
User hints	-	

(table continues...)

1 Mcu driver
Table 442 (continued) Specification for Mcu_ClockFailureNotification API

SFR accessed	SCU_OSCCON(r), SCU_PERPLLSTAT(r), SCU_SYSPLLSTAT(r) <i>Note : The list includes all the SFRs accessed in the context of the API. It lists the SFRs accessed by the driver and called interfaces from other drivers. During runtime, the SFRs accessed from this list may vary based on configuration and execution context.</i>
Autosar Version	Applicable for Autosar versions 4.2.2 and 4.4.0.

1.3.5 Scheduled functions

The MCU driver does not provide any scheduled functions.

1.3.6 Interrupt service routines

This section lists all the interrupt handlers of the MCU driver.

1.3.6.1 Mcu_17_Ccu6_Channellsr

Table 443 Specification for Mcu_17_Ccu6_ChannelIsr API

Syntax	<pre>void Mcu_17_Ccu6_ChannelIsr (const Mcu_17_Ccu6_KernelIdentifierType Kernel, const Mcu_17_Ccu6_ComparatorType Comparator)</pre>	
Service ID	0x95	
Sync/Async	Synchronous	
Safety Level	Refer to the release notes for the safety related info	
Re-entrancy	Reentrant for different channels	
Parameters (in)	Kernel Comparator	CCU6 Kernel CCU6 Comparator type
Parameters (out)	-	-
Parameters (in - out)	-	-
Return	void	-
Description	Mcu_17_Ccu6_Channellsr is the interrupt service routine of a CCU6 timer channel and is invoked by the interrupt frame installed in the interrupt vector table. Mcu_17_Ccu6_Channellsr identifies the user of the specified channel and invokes a known call back function associated with the user.	
Source	IFX	
Error handling	MCU_E_INVALID_ISR	
Configuration dependencies	-	

(table continues...)

1 Mcu driver
Table 443 (continued) Specification for Mcu_17_Ccu6_ChannelIsr API

User hints	-
SFR accessed	CCU6_IEN(r), CCU6_IS(r), CCU6_ISR(w) <i>Note : The list includes all the SFRs accessed in the context of the API. It lists the SFRs accessed by the driver and called interfaces from other drivers. During runtime, the SFRs accessed from this list may vary based on configuration and execution context.</i>
Autosar Version	Applicable for Autosar versions 4.2.2 and 4.4.0.

1.3.6.2 Mcu_17_Eru_GatingIsr
Table 444 Specification for Mcu_17_Eru_GatingIsr API

Syntax	<pre>void Mcu_17_Eru_GatingIsr (const Mcu_17_Eru_SrcIdentifierType EruSrcId)</pre>	
Service ID	0x98	
Sync/Async	Synchronous	
Safety Level	Refer to the release notes for the safety related info	
Re-entrancy	Reentrant for different channels	
Parameters (in)	EruSrcId	Input Channel
Parameters (out)	-	-
Parameters (in - out)	-	-
Return	void	-
Description	Mcu_17_Eru_GatingIsr is the interrupt service routine of the ERU and is invoked by the interrupt frame installed in the interrupt vector table. It identifies the user of the specified ERU channel and invokes a known call back function associated with the user.	
Source	IFX	
Error handling	MCU_E_INVALID_ISR	
Configuration dependencies	-	
User hints	The value of parameter IrqFlag is always zero as it is checked and passed. This parameter is just to maintain the consistency	
SFR accessed	SCU_EIFR(r), SCU_FMR(w), SCU_IGCR(r), SCU_PDRR(r) <i>Note : The list includes all the SFRs accessed in the context of the API. It lists the SFRs accessed by the driver and called interfaces from other drivers. During runtime, the SFRs accessed from this list may vary based on configuration and execution context.</i>	
Autosar Version	Applicable for Autosar versions 4.2.2 and 4.4.0.

Autosar Version	Applicable for Autosar versions 4.2.2 and 4.4.0.

1.3.7 Callout

The MCU driver does not provide any callout.

1.3.8 Errors Handling

This section describes the various error types reported by the MCU driver.

Error Name: Description	Source	Error ID (AS422)	Type (AS422)	Error ID (AS440)	Type (AS440)
MCU_E_CCUC6_CLC_DISABLE_ERROR : Inability to turn OFF the CCUC6 kernel clock disable bit	IFX	Assigned by DEM	Production Error	Assigned by DEM	Production Error
MCU_E_CCUC6_CLC_ENABLE_ERROR : Inability to turn ON the CCUC6 kernel Clock enable bit	IFX	Assigned by DEM	Production Error	Assigned by DEM	Production Error
MCU_E_CCUCON_UPDATE_ERROR : Inability to update the CCUCON register	IFX	Assigned by DEM	Production Error	Assigned by DEM	Production Error
MCU_E_CONVCTRL_CLC_DISABLE_ERROR : Inability to turn OFF the CONVCTRL Clock disable bit	IFX	Assigned by DEM	Production Error	Assigned by DEM	Production Error
MCU_E_CONVCTRL_CLC_ENABLE_ERROR : Inability to turn ON the CONVCTRL Clock enable bit	IFX	Assigned by DEM	Production Error	Assigned by DEM	Production Error
MCU_E_CORE_MISMATCH : API is called from a core which is not the master core	IFX	0X68	DET_SAFETY	0X68	DET_SAFETY
MCU_E_GPT12_CLC_DISABLE_ERROR : Inability to turn OFF the GPT12 clock disable bit	IFX	Assigned by DEM	Production Error	Assigned by DEM	Production Error
MCU_E_GPT12_CLC_ENABLE_ERROR : Inability to turn ON the GPT12 Clock enable bit	IFX	Assigned by DEM	Production Error	Assigned by DEM	Production Error
MCU_E_GTM_CLC_DISABLE_ERROR : Inability to turn OFF the GTM clock disable bit	IFX	Assigned by DEM	Production Error	Assigned by DEM	Production Error

1 Mcu driver

Error Name: Description	Source	Error ID (AS422)	Type (AS422)	Error ID (AS440)	Type (AS440)
MCU_E_GTM_CLC_ENABLE_ER R: Inability to turn ON the GTM Clock enable bit	IFX	Assigned by DEM	Production Error	Assigned by DEM	Production Error
MCU_E_INIT_FAILED: Error is reported when Mcu_Init() API is called when it is already initialized	AUTOSAR	0X11	DET_SAFETY	0X11	DET_SAFETY
MCU_E_INVALID_ISR: Error is reported if an ISR is invoked on a spurious interrupt	IFX	0XCA	SAFETY	0XCA	SAFETY
MCU_E_OSC_FAILURE: Inability of the oscillator to deliver correct clock	IFX	Assigned by DEM	Production Error	Assigned by DEM	Production Error
MCU_E_PARAM_CLOCK : ClockSetting parameter does not match the corresponding data in the Mcu_ConfigType object	AUTOSAR	0X0B	DET_SAFETY	0X0B	DET_SAFETY
MCU_E_PARAM_CONFIG: ConfigPtr passed to Mcu_Init is NULL	AUTOSAR	0X0A	DET_SAFETY	0X0A	DET_SAFETY
MCU_E_PARAM_CPUID: Input argument for CPU Id passed with an invalid core index	IFX	0X13	DET_SAFETY	0X13	DET_SAFETY
MCU_E_PARAM_DIV_VAL: CpuCcucon divider update requested with value higher than maximum possible divider value	IFX	0X15	DET_SAFETY	0X15	DET_SAFETY
MCU_E_PARAM_MODE : McuMode parameter does not match the corresponding data in the Mcu_ConfigType object	AUTOSAR	0X0C	DET_SAFETY	0X0C	DET_SAFETY
MCU_E_PARAM_POINTER: Versioninfo pointer passed to Mcu_GetVersionInfo is NULL	AUTOSAR	0X10	DET_SAFETY	0X10	DET_SAFETY
MCU_E_PARAM_RAMSECTION : RamSection parameter does not match the corresponding data in the Mcu_ConfigType object	AUTOSAR	0X0D	DET_SAFETY	0X0D	DET_SAFETY
MCU_E_PARAM_STDBY: Mcu_VextStdbyCtrl API called with input parameters other than the specified valid inputs.	IFX	0x16	DET_SAFETY	0x16	DET_SAFETY

1 Mcu driver

Error Name: Description	Source	Error ID (AS422)	Type (AS422)	Error ID (AS440)	Type (AS440)
MCU_E_PARAM_TRAPID: Trap-related read or write with an invalid trap source id	IFX	0X14	DET_SAFETY	0X14	DET_SAFETY
MCU_E_PERIPHERAL_PLL_LOCK_LOSS: This Production error is raised when Loss of Peripheral PLL lock occurs	IFX	Assigned by DEM	Production Error	Assigned by DEM	Production Error
MCU_E_PERIPHERAL_PLL_TIMEOUT_ERR: Production error is raised due to inability of the peripheral PLL K2/K3 dividers and power mode to be updated within the specified time	IFX	Assigned by DEM	Production Error	Assigned by DEM	Production Error
MCU_E_PHSCFG_UPDATE_ERR: Error is raised when phase configuration register of Converter Control update fails	IFX	0XCB	SAFETY	0XCB	SAFETY
MCU_E_PLL_NOT_LOCKED: Either the system or peripheral PLL is not locked	AUTOSAR	0X0E	DET_SAFETY	0X0E	DET_SAFETY
MCU_E_PMSWCR_UPDATE_ERR: Inability to update the PMSWCRx register	IFX	Assigned by DEM	Production Error	Assigned by DEM	Production Error
MCU_E_SW_RESET_FAILED: Error is reported when software reset fails after calling the Mcu_PerformReset API	IFX	0XC9	SAFETY	0XC9	SAFETY
MCU_E_SYSTEM_PLL_LOCK_LOSS: This Production error is raised when Loss of System PLL lock occurs	IFX	Assigned by DEM	Production Error	Assigned by DEM	Production Error
MCU_E_SYSTEM_PLL_TIMEOUT_ERR: Production error is raised due to inability of the system PLL K2 divider and power mode to be updated within the specified time	IFX	Assigned by DEM	Production Error	Assigned by DEM	Production Error
MCU_E_UNAUTHORIZED_REQUESTER: Power down mode entry is requested by an unauthorized CPU	IFX	0X12	DET_SAFETY	0X12	DET_SAFETY
MCU_E_UNINIT: Error is reported if the API is called before Mcu_Init is called	AUTOSAR	0X0F	DET_SAFETY	0X0F	DET_SAFETY

1 Mcu driver
1.3.9 Deviations and limitations

The section describes the deviations and limitations of the MCU driver.

1.3.9.1 Deviations

The section describes the deviations of the MCU driver.

1.3.9.1.1 Software specification deviations

This section describes the deviations from software specification

Table 450 Known deviations

Reference	Deviation
Safety error for unintended service request	Refer to Reporting of unintended service requests.
Deviation from Autosar specific configuration parameters	<p>The MCU driver deviates from Autosar specification on following configuration parameters</p> <ul style="list-style-type: none"> - McuClockReferencePointFrequency - McuNumberOfMcuModes - McuRamSectors - McuClockSrcFailureNotification <p>These parameters are not used and have no effect on code generation.</p>
For all requirements related to Production errors	<p>Reporting of Production error: Dem_ReportErrorStatus is done through Mcal_Wrapper_Dem_ReportErrorStatus interface for AUTOSAR 4.2.2 and Dem_SetEventStatus is done through Mcal_Wrapper_Dem_SetEventStatus interface for AUTOSAR 4.4.0.</p> <p>All production error related datatypes and modified interfaces inclusion shall be done via Mcal_Wrapper.h</p>

1.3.9.1.2 AMDC Violations

The MCU driver does not have any AMDC violations.

1.3.9.1.3 VSMD Violations

This section describes the violations reported by the EB VSMD checker tool with respect to AUTOSAR.

Table 451 Violations reported by VSMD checker tool for Constr_5520

Rule ID:	Constr_5520
VSMD Node(s):	/AURIX2G/EcucDefs/Mcu/McuPublishedInformation/McuResetReasonConf/McuResetReason

(table continues...)

1 Mcu driver
Table 451 (continued) *Violations reported by VSMD checker tool for Constr_5520*

Description:	The values of EcucParameterDefs with symbolicNameValue attribute set to true shall have their valueConfigClass.configClass set to PreCompile
Additional Information:	-

Table 452 *Violations reported by VSMD checker tool for EB03*

1 Mcu driver
Table 460 (continued) Revision History

2023-06-14	9.0	Document is Released
2023-06-06	8.1	<ul style="list-style-type: none"> - Dem.h removed and Mcal_Wrapper.h added in the "1.1.3.1 C file structure" section "Figure 2 Mcu_C_file_structure-1.png" and "Table 2 C file structure". - DEM module removed and Mcal_Wrapper module added in "1.1.4.1 Integration with AUTOSAR stack" section - All references to Dem changed to production error in sections 1.1.5.4, 1.3.1.60.4, 1.3.1.53.1, 1.3.4.1, 1.3.8 and Dem_ReportErrorStatus changed to Mcal_Wrapper_Dem_ReportErrorStatus, Dem_SetEventStatus changed to Mcal_Wrapper_Dem_SetEventStatus in the sections 1.3.1.53, 1.3.1.54 - ASIL level field changed to Safety level with value as "refer to release notes" for all APIs under "1.3.3 Functions - APIs" - In Section 1.3.3.23 Mcu_InitCheck() Api E_NOT_OK case description is updated to list all the conditions when E_NOT_OK is returned. - Updated Reentrancy information of following functions under section "1.3.3 Functions - APIs" <ul style="list-style-type: none"> · Mcu_17_Gtm_TomChInitCheck · Mcu_17_Gtm_AtomChInitCheck · Mcu_17_Gtm_TimChInitCheck · Mcu_17_Ccu6_TimerInitCheck · Mcu_17_Gpt12_TimerInitCheck - Service IDs of following APIs are corrected under section "1.3.3 Functions - APIs" <ul style="list-style-type: none"> · Mcu_17_Gtm_AtomChannelDisable · Mcu_17_Gtm_TomChannelEnable · Mcu_17_Gtm_IsTomChannelEnabled · Mcu_17_Gtm_ConnectTimerOutToPortPin - All Mcu reset reason containers are added under section "1.3.1 Configuration interfaces" - 'Software Specification Deviations' section is updated for 'AUTOSAR requirement' to change reference to "For all requirements related to Production/Runtime errors" and to add Mcal_Wrapper module information in the description
2022-08-10	8.0	Document is released
2022-08-01	7.1	<ul style="list-style-type: none"> - Limitations section updated to add naming convention of configuration parameters McuHardwareResourceAllocationConf and GtmClusterConf. - SFR access updated for functions Mcu_DeInit(), Mcu_17_Gtm_TimChannelInit(), Mcu_17_Ccu6_TimerInit(), Mcu_17_Ccu6_TimerInitCheck() and Mcu_17_Ccu6_TimerDeInit().
2021-11-08	7.0	Document is released
2021-11-04	6.1	'Mapping of hardware-software interfaces' figure is corrected
2021-10-27	6.0	Document is released

(table continues...)

1 Mcu driver
Table 460 (continued) *Revision History*

2021-10-13	5.1	<ul style="list-style-type: none"> - Option "TCK_EXT_CLOCK0_SEL13" removed from configuration parameter "McuExtClockOutSel0" - Option "OSCFL_EXT_CLOCK1_SEL15" removed from configuration parameter "McuExtClockOutSel1" - Limitation removed on usage of options provided in McuExtClockOutSel0 and McuExtClockOutSel1 - Added 4 more entries for McuStdbymodeRamEnable to support non-cached memory - Config variant attribute table information is removed and added this information in 'Configuration interfaces' section.
2021-03-22	5.0	Document is released
2021-03-22	4.1	Limitation added on usage of options provided in McuExtClockOutSel0 and McuExtClockOutSel1
2021-03-02	4.0	Document is released
2021-03-02	3.1	<ul style="list-style-type: none"> - File structure updated for inclusion of IfxPms_bf.h - PMS unsupported features updated - Description updated for McuStdbymodeClkSelection - Note added in McuStdbymodeClkSelection
2020-11-25	3.0	Document is released
2020-11-24	2.1	SFR information updated for Mcu_ClockFailureNotification
2020-10-15	2.0	Document is released
2020-10-13	1.1	<ul style="list-style-type: none"> - Container and parameters for Port pin to GTM TIM connection added - Configuration parameters added for VDD and VEXT standby support - AoU "SMU alarms with clock initialization" updated with details of alarms
2020-08-14	1.0	Document is released
2020-07-28	0.1	<ul style="list-style-type: none"> -Initial Version -MCU driver chapter moved from MC-ISAR_TC3xx_UM_Basic to this document -VSMD violations added -Limitation on naming convention of configuration containers and parameters in Tresos added -Deviations from software specification added -Limitation related to "#undef ACCESS" added -Deviation related to use of Rte_Dem_Type.h for ASR 440 added
